Ratings

Morningstar - ★★★★★

Fund aim

The fund seeks to provide both excess returns and dependable exposure to the European large-cap asset class through dynamic stock level portfolio rebalancing. The fund's mathematical investment approach is highly-evolved and targets the optimal portfolio with the potential for the highest return per unit of risk, or risk-adjusted return, and results in portfolios that are diversified and style-consistent.

Key points

- Broad Exposure to European Large Caps: Intech utilises a unique combination of dynamic stock level rebalancing, portfolio level risk management.
- 30+ Years of volatility research: Unemotional and repeatable process based on the understanding of security price movements. Intech is one of the largest institutional quantitative equity managers in the world.
- Core Holding: The Fund seeks net-of-fee total returns above the respective benchmark without concentration or high beta risks. Since the process is different from traditional fundamental or quantitative strategies, the pattern of excess returns tends to be less correlated, which may provide additional diversification in an overall portfolio.

Additional information

No Morningstar rating is shown if the fund is less than three years old or rating is below 3 stars. A short-term trading fee may be applied upon exiting the fund as per the prospectus. Note that any differences among portfolio securities currencies, share class currencies, and your home currency will expose you to currency risk. This is an Irish Investment Company regulated by the Central Bank of Ireland.

What are the risks specific to this fund?

- This fund is designed to be used only as one component of several in a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested into this fund.
- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- If a Fund has a high exposure to a particular country or geographical region it carries a higher level of risk than a Fund which is more broadly diversified.
- If the Fund holds assets in currencies other than the base currency of the Fund or you invest in a share class of a different currency to the Fund (unless 'hedged'), the value of your investment may be impacted by changes in exchange rates.
- Securities within the Fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses.
- The Fund uses mathematical formulae to select investments. There is a risk that the processes used to invest in shares with higher volatility and low price-correlation may not achieve positive returns or outperform.

General risks

- Past performance is not a guide to future performance.
- The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested.
- Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change.
