JANUS HENDERSON CAPITAL FUNDS PLC - JANUS HENDERSON BALANCED FUND

A5m HEUR ISIN IE00B83BYG91

Key investment risks:
-The Fund's investments in equities are subject to equity market risk due to fluctuation of securities values.
-The Fund invests in debt securities and asset/ mortgage-backed securities/ commercial papers; and is subject to greater interest rate, credit/ counterparty, volatility, liquidity, downgrading, valuation, credit rating risks and may be more volatile.
-Investments in the Fund involve general investment, RMB currency and conversion, currency, hedging, economic, political, policy, foreign exchange, liquidity, tax, legal, regulatory and securities financing transactions related risks. In extreme market conditions, you may lose your entire investment.
-The Fund may invest in financial derivatives instruments for investment and efficient portfolio management purposes. This may involve counterparty, liquidity, leverage, volatility, valuation, over-the-counter transaction, credit, currency, index, settlement default and interest risks; and the Fund may suffer total or substantial losses.
-The Fund's investments are concentrated in US companies/ debt securities and may be more volatile.
-The Fund may at its discretion pay dividends (i) pay dividends out of the capital of the Fund, and/ or (ii) pay dividends out of gross income while charging all or part of the fees and expenses to the capital of the Fund, resulting in an increase in distributable income available for the payment of dividends by the Fund and therefore, the Fund may effectively pay dividends out of capital. This may result in an immediate reduction of the Fund's net asset value per share, and it amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment.
-Investors should not only base on this document alone to make investment decisions and should read the offering documents including the risk factors for further details.

Investment Objective and Strategy

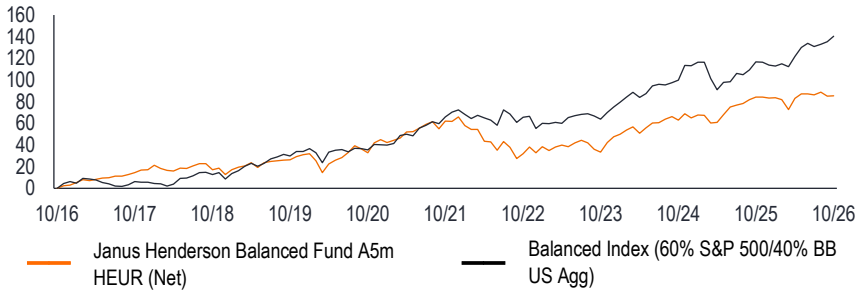

The Fund aims to seek long-term capital growth, consistent with preservation of capital and balanced by current income. The Fund invests between 35%-70% of its net asset value in equities, and between 30%-65% of its net asset value in debt securities, loan participations or cash. At least 80% of its net asset value is invested in US companies and US issuers selected mainly for their income potential.

Bond credit quality ratings provided by Janus Henderson Investors are based on the existing JHI house-derived rating, which uses ratings from Moody's, Standard & Poor's and Fitch. Where no ratings are available from these three agencies, Kroll and DBRS are used. Where both Kroll and DBRS ratings are available, an average of the two is used. Where only one rating is available, that rating is used. Ratings are measured on a scale that ranges from Aaa (highest) to B, with any lower ratings grouped into 'Below B' (lowest).

Fees & charges (%)

Maximum initial sales charge	5.00
Annual management charge (AMC)	1.00

Fund charges will impact the value of your investment. In particular, the ongoing charges applicable to each fund will dilute investment performance, particularly over time. For further explanation of charges please visit our Fund Charges page at www.janushenderson.com. Under some circumstances initial charges may apply. Please refer to the Prospectus for more details.

Additional fund information

Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. Effective 31 July 2024, the benchmark of the Janus Henderson Balanced Fund was changed from 55% S&P 500® / 45% Bloomberg US Aggregate Bond to 60% S&P 500® / 40% Bloomberg US Aggregate Bond. Janus Henderson Balanced Fund's investment policy was changed effective 21 November 2025. Past performance shown before this date was achieved under circumstances that no longer apply. 100% of the Annual Management Charge is taken from capital. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. This is an Irish Investment Company regulated by the Central Bank of Ireland. Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations. To obtain our prospectus and any additional information please visit our website on: www.janushenderson.com. A short-term trading fee may be applied upon exiting the fund as per the prospectus. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund. Cash balances and exposures are based on settled and unsettled trades as at the reporting date.

Source for fund ratings/awards

Overall Morningstar Rating™ is a measure of a fund's risk-adjusted return, relative to similar funds. Fund share classes are rated from 1 to 5 stars, with the best performers receiving 5 stars and the worst performers receiving a single star. Where available, overall Morningstar Rating™ is shown for share classes achieving a rating of 4 or 5 stars. For the Morningstar Rating category, refer to page 1 Morningstar sector. Ratings should not be taken as a recommendation. For more detailed information about Morningstar Ratings, including its methodology, please go to https://shareholders.morningstar.com/investor-relations/governance/Compliance--Disclosure/default.aspx.

Glossary

Beta
Beta measures how a fund or security moves in relationship to the overall market. A market has a beta of 1. If the fund/security's beta is more than 1, it moves more than the market, while a beta lower than 1 means it moves to a lesser extent than the market. A negative beta could mean the fund/security moves in the opposite direction to the market.

Duration
Duration can measure how long it takes (in years) for an investor to be repaid a bond's price by the bond's total cash flows. Duration can also measure the sensitivity of a bond's or fixed-income portfolio's price to changes in interest rates. The longer a bond's duration, the higher its sensitivity to changes in interest rates, and vice versa. 'Going short duration' refers to reducing the average duration of a portfolio, while 'going long duration' refers to extending a portfolio's average duration.

Price-to-book (P/B) ratio
A financial ratio used to value a company's shares. It is calculated by dividing a company's market value (share price) by the book value of its equity (value of the company's assets on its balance sheet). A P/B value <1 can indicate a potentially undervalued company or a declining business. The higher the P/B ratio, the higher the premium the market is willing to pay for the company above the book (balance sheet) value of its assets.

Price-to-earnings (P/E) ratio
A popular ratio used to value a company's shares, compared to other stocks, or a benchmark index. It is calculated by dividing the current share price by its earnings per share.

Sharpe ratio
This measures a portfolio's risk-adjusted performance. A high Sharpe ratio indicates a better risk-adjusted return. The ratio is designed to measure how far a portfolio's return can be attributed to fund manager skill as opposed to excessive risk taking.

Standard deviation
A statistic that measures the variation or dispersion of a set of values/data. A low standard deviation shows the values tend to be close to the mean while a high standard deviation indicates the values are more spread out. In terms of valuing investments, standard deviation can provide a gauge of the historical volatility of an investment.

Tracking error
This measures how far a portfolio's actual performance differs from its benchmark index. The lower the number, the more closely it resembles the index.

WAM (Weighted Average Maturity)
The average time remaining until the maturity of assets in a portfolio.

Weighted average market cap
The average market capitalisation of a holding, weighted by the size of that position in a portfolio or index.

Yield to worst
The lowest yield a bond with a special feature (such as a call option) can achieve provided the issuer does not default. When used to describe a portfolio, this statistic represents the weighted average across all the underlying bonds held.
