GLOBAL TECHNOLOGY AND INNOVATION FUND

At a glance

Performance*
The Fund returned 4.04%, the Index returned 4.32% and the Sector returned 1.60%.

Contributors/detractors
Amazon.com was a relative detractor, while Nebius was a contributor to relative performance.

Outlook
While supply constraints continue to provide a tailwind to artificial intelligence (AI) infrastructure providers, we favour semiconductor, hyperscalers and software stocks that we believe can perform well across various scenarios.

Portfolio management

Denny Fish

Jonathan Cofsky, CFA

Investment environment

- Global technology stocks faced headwinds against a backdrop of higher interest rates. The Federal Reserve (Fed) raised interest rates by 25 basis points (bps) to 4.0% in September and indicated that further monetary policy tightening was possible.
- AI-related stocks benefited from periods of enthusiasm for the technology, although investors continued to have concerns about valuations and the sustainability of the recent robust pace of industry capital spending.
- Shares of semiconductor and semiconductor equipment companies were strong performers; investors appeared to become more confident in the underlying fundamentals supporting chip stocks. Technology hardware stocks also outperformed.
- Software stocks lagged, with varying performance for companies considered to be beneficiaries of AI versus those perceived to be at risk from AI-driven industry disintermediation.

Portfolio review

Amazon was a relative detractor. Its shares fell due to concerns over the company's rapid capital investment in AI, logistics and fulfilment infrastructure. While this investment cycle has fuelled concerns about near-term cash flow, the company's management team expects this spending to help build on core competencies in ecommerce, cloud computing, digital advertising and grocery retail. In July, Amazon reported strong quarterly results that highlighted the strength of its AWS cloud-computing business.

DoorDash was another relative detractor as the share price fell after rallying earlier in the third quarter. In August, the technology-enabled meal delivery business reported solid second-quarter results that demonstrated continued resilience in its core restaurant business. However, the stock faced headwinds in September due to a higher interest rate environment that pressured longer-duration growth stories. Investors have also been concerned about delays in the company's growth initiatives, including its grocery business and retail expansion efforts.

Nebius Group was a relative contributor. The technology company operates large-scale graphics processing unit (GPU) clusters and data centres in Europe, the US and the Middle East. It also provides AI start-ups, enterprise companies and hyperscalers with additional data centre capacity by renting out powered shells with GPU capacity. The company announced new partnerships with

technology companies, which drove further interest in the stock.

KLA was also a relative contributor as its shares regained ground after a pullback earlier in the third quarter. KLA is a supplier of semiconductor capital equipment, including process-control, inspection and metrology systems. KLA is expected to benefit if the requirements of AI infrastructure drive increased demand across foundry, DRAM, NAND and advanced packaging. Against this backdrop, the company has increased its full-year 2026 outlook, while signalling the potential for significant growth in 2027.

Manager outlook

We believe that the story of the AI build-out for the remainder of the year and into 2027 is likely to be one of capacity constraints. This is true across memory, optics, GPUs, central processing units (CPUs), components and power. With demand increasing as companies, sovereigns and individuals uncover new ways to deploy AI, we believe this shortfall could persist through to the end of the decade. Consequently, this underpins our constructive view on the AI complex. This optimism is not reserved only for the enablers. As we have discussed in recent quarters, AI enhancers and end users are now participating and seeing measurable operational and financial contribution.

Within AI infrastructure and software, we continue to favour companies that we think could perform well across a wider range of outcomes. As discussed earlier, data racks must upgrade to optical connectivity independent of the rush to build data centres. In software and internet infrastructure, we favour companies whose products we believe help usher in the era of AI agents and inference by storing large amounts of data and offering tools to process it.

There are risks. AI has the potential to disintermediate legacy software segments, including creative applications and those such as web design, where vibe coding may offer a viable alternative. We think products that act as a system of record may be more insulated, as may those with deep vertical capabilities. In many of these areas, growth has decelerated, but that's largely due to AI sucking all the oxygen from technology budgets at the moment. Still, these software companies' unique expertise may buy them time as management teams seek to adapt their products to the AI era. The widening range of outcomes for such names makes us very selective when considering them.

As evidenced by the recent pullback in AI infrastructure stocks, investors perhaps understandably are mindful of a highly concentrated equities market. They may soon be able to witness a litmus test in the form of the anticipated initial public offerings (IPOs) of frontier model labs Anthropic and OpenAI. Should these offerings be well received, they could provide another tailwind for AI enablers. The additional liquidity could also (to a degree) alleviate concerns about the ability to meet the incremental financing required to continue the AI build-out. Furthering that aim could be one (or both) of the newly public companies achieving investment grade credit status.

Financing, on the other hand, does present a remote risk of slowing down the broad AI theme. This year marks the point where AI-related financing needs exceed the operating cash flow of leading hyperscalers. Companies with massive cash engines, often derived from internet or advertising businesses, may be less affected by jittery bond investors or higher interest rates. Companies with concentrated customer bases and meagre cash cushions could be tested should a deceleration in AI investment and deployment occur. While this might be a low probability scenario, it does illustrate the need for investors to gauge the financial position of big spending hyperscalers and their customers.

Fund charges will impact the value of your investment. In particular, the ongoing charges applicable to each fund will dilute investment performance, particularly over time. For further explanation of charges please visit our Fund Charges page at www.janushenderson.com.

Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations.

Investment objective

The Fund aims to provide capital growth over the long term. Performance target: To outperform the MSCI ACWI Information Technology Index by at least 2% per annum, before the deduction of charges, over any 5 year period.

For the fund's investment policy, refer to the Additional fund information on page 4.
Past performance does not predict future returns.

Fund details

Inception date	31 March 2000

Rating as at previous month end. Rating is for the representative share class as defined in the performance table.

Additional fund information

Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. Please note the performance target is to be achieved over a specific annualised time period. Refer to the performance target wording within the objective. Availability of share classes shown may be limited by law in certain jurisdictions. Performance records/scenarios are detailed within the fund's specific KIID/KID; fees and charges, and the respective risk rating may vary. Further information can be found in the fund's prospectus and KIID/KID, which must be reviewed before investing. Please consult your local sales representative and/or financial adviser if you have any queries. This is an Irish Investment Company regulated by the Central Bank of Ireland. A short-term trading fee may be applied upon exiting the fund as per the prospectus. These are the views of the author at the time of publication and may differ from the views of other individuals/teams at Janus Henderson Investors. Any securities, funds, sectors or indices mentioned within this article do not constitute or form part of any offer or solicitation to buy or sell them. The information in this commentary does not qualify as an investment recommendation. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund. Cash balances and exposures are based on settled and unsettled trades as at the reporting date.

Investment policy

The Fund invests at least 80% of its assets in a portfolio of shares (also known as equities) of companies, of any size, which are technology-related or derive profits from technology, in any country. Up to 20% may be invested in developing markets. The Fund may also invest in other assets including cash and money market instruments. The Sub-Investment Adviser may use derivatives (complex financial instruments) to reduce risk, to manage the Fund more efficiently, or to generate additional capital or income for the Fund. The Fund is actively managed with reference to the MSCI ACWI Information Technology Index, which is broadly representative of the companies in which it may invest, as this forms the basis of the Fund's performance target. The Sub-Investment Adviser has discretion to choose individual investments for the Fund with weightings different to the index or not in the index, but at times the Fund may hold investments similar to the index.

Investment strategy

The Sub-Investment Adviser looks to identify growth companies by following a process of 'bottom-up' fundamental company analysis to invest in companies that typically have a strong competitive position and improving earnings. This approach rests on a belief that some companies have inherent strengths for creating shareholder value over time, have better prospects than their peer groups and should therefore outperform even in challenging industry and economic circumstances.

Fund specific risks

Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result. Shares of small and mid-size companies can be more volatile than shares of larger companies, and at times it may be difficult to value or to sell shares at desired times and prices, increasing the risk of losses. High exposure to a particular country or geographical region carries a higher level of risk than a more broadly diversified portfolio. The Fund is focused towards particular industries or investment themes and may be heavily impacted by factors such as changes in government regulation, increased price competition, technological advancements and other adverse events. If the Fund holds assets in currencies other than the base currency of the Fund, or you invest in a share/unit class of a different currency to the Fund (unless hedged, i.e. seeks to mitigate exchange rate movements between the share/unit class currency and the base currency of the Fund), the value of your investment may be impacted by changes in exchange rates. Derivatives may be used to help achieve the investment objective. This can result in leverage (higher levels of debt), which can magnify an investment outcome. Gains or losses may therefore be greater than the cost of the derivative. Derivatives also introduce other risks, in particular, that a derivative counterparty may not meet its contractual obligations. When the Fund, or a share/unit class, seeks to mitigate exchange rate movements of a currency relative to the base currency (hedge), the hedging strategy itself may positively or negatively impact the value of the Fund due to differences in short-term interest rates between the currencies. Securities could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses. Losses could be incurred if a counterparty became unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider.

Source for risk rating

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 5 out of 7, which is a medium-high risk class. The risk indicator assumes you keep the product for 5 years. This rates the potential losses from future performance at a medium-high level, and poor market conditions will likely impact our capacity to pay you.
