Fees & charges (%)

Annual management charge (AMC)	0.63
Ongoing charge (OCF)	0.91

All ongoing charges stated are as per latest published report and accounts.

Fund charges will impact the value of your investment. In particular, the ongoing charges applicable to each fund will dilute investment performance, particularly over time. For further explanation of charges please visit our Fund Charges page at www.janushenderson.com.

Under some circumstances initial charges may apply. Please refer to the Prospectus for more details.

Additional fund information

Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. From 11 March 2022, the Fund changed its Investment Policy. The past performance shown before this change was therefore achieved under circumstances that no longer apply. From 31 March 2025, the Fund's performance target changed from the IA Mixed Investment 0-35% Shares sector to the Composite Benchmark, the Investment policy and benchmark also changed. From 23 April 2026, the Fund changed its Investment Strategy. The past performance shown before this change was therefore achieved under circumstances that no longer apply. The Sector remains as an additional useful comparator. The fund will include investments in various different share classes of split capital investment trust companies and other highly geared shares. Such companies employ borrowing to 'gear up' the assets with the aim of enhancing returns. Where this occurs, shares in such companies will rank after such borrowings, and should those companies' assets fall in value, their ability to pay their shareholders may be affected. You should note that as a result of investing in companies that employ gearing, the price of the fund may be more volatile and could be subject to sudden and large falls in value. If there is a sufficiently large fall in value, you may not get back any of your investment. As the fund invests in such share classes, it may be regarded as higher risk. Fund size at 12pm on last business day of month. 100% of the Annual Management Charge is taken from capital. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. Performance for the share class is calculated at 12pm and performance of the index is calculated as at close of business. Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund. Cash balances and exposures are based on settled and unsettled trades as at the reporting date.
The composite benchmark is a measure of the combined performance of the following:

Equities (shares) – 30%

- 7.5 % FTSE All Share Index
- 22.5% MSCI All Country World Index ex UK,

Fixed Income (corporate bonds) – 60%

- 15% Bloomberg Barclays Sterling Aggregate Total Return GBP Index,
- 45% Bloomberg Barclays Global Aggregate Bond Index (GBP Hedged),

Cash Investments

- 10% in SONIA

The Composite Benchmark forms the basis of the Fund's performance target and provides a useful comparison against which the Fund's performance can be assessed over time.
The Investment Association (IA) groups funds with similar geographic and/or investment remit into sectors. The Fund's ranking within the sector (as calculated by a number of data providers) can be a useful performance comparison against other funds with similar aims.

Investment policy

The Fund invests in Collective Investment Schemes (other funds including those managed by Janus Henderson and Exchange Traded Funds) to provide diversified global exposure to a range of assets including shares (equities) of companies, bonds issued by companies and governments, and to a lesser extent, alternative assets such as property, commodities, private equity and hedge funds. In normal market conditions up to 35% of the Fund's exposure will be to equities, however, there is no minimum requirement on the Fund to invest in equities. At least 45% of the Fund's exposure will be to investment grade fixed income securities, such as corporate and government bonds, and/or cash investments. At least 80% of the Fund's net assets value will be invested in securities denominated in established market currencies (US Dollar, Sterling and Euro). 40% of the Fund's net assets value must be invested in securities denominated in Sterling, this includes securities that have been hedged back into Sterling. The Fund may also invest directly in other assets including developed market government bonds, investment trusts, cash and money market instruments. The Investment Manager may use derivatives (complex financial instruments) with the aim of making investment gains in line with the Fund's objective, to reduce risk or to manage the Fund more efficiently. The Fund is actively managed with reference to the Composite Benchmark, as set out in the Funds objective, which forms the basis of the Fund's performance target. The Investment Manager has a high degree of freedom to choose individual investments for the Fund. As an additional means of assessing the performance of the Fund, the IA Mixed Investment 0–35% Shares sector average, which is based on a peer group of broadly similar funds, may also provide a useful comparator.

Investment strategy

The Investment Manager believes that asset allocation opportunities are generated by inefficient markets over short term periods and the Fund's asset mix is actively adjusted to reflect this and to reduce overall risk. The Fund will allocate across regional equities, the entire bond universe, alternative asset classes such as property and commodities and cash in weights cognisant of the benchmark index. Asset allocation views can be formed on the grounds of fundamental research, asset class valuations, market sentiment, investor positioning, news flow, technical factors and diversification. Investments are implemented primarily through actively managed funds, while passive (index tracking) instruments (primarily ETFs or derivatives) are used for short term tactical trades or for low cost implementation of pure macroeconomic views. The Fund may also hold up to 20% in developed market government bonds.

Fund specific risks

An issuer of a bond (or money market instrument) may become unable or unwilling to pay interest or repay capital. If this happens or the market perceives this may happen, the value of the bond will fall. When interest rates rise (or fall), the prices of different securities will be affected differently. In particular, bond values generally fall when interest rates rise (or are expected to rise). This risk is typically greater the longer the maturity of a bond investment. The Fund invests in other funds (including exchange-traded funds and investment trusts/companies). This may introduce more risky assets, derivative usage and other risks associated with the underlying funds, as well as contributing to a higher level of ongoing charges. If the Fund holds assets in currencies other than the base currency of the Fund, or you invest in a share/unit class of a different currency to the Fund (unless hedged, i.e. seeks to mitigate exchange rate movements between the share/unit class currency and the base currency of the Fund), the value of your investment may be impacted by changes in exchange rates. Derivatives may be used to help achieve the investment objective. This can result in leverage (higher levels of debt), which can magnify an investment outcome. Gains or losses may therefore be greater than the cost of the derivative. Derivatives also introduce other risks, in particular, that a derivative counterparty may not meet its contractual obligations. Securities could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses. Some or all of the ongoing charges and other costs of the Fund may be taken from capital, which may erode capital or reduce potential for capital growth. Losses could be incurred if a counterparty became unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider.

Source for fund ratings/awards

Where available, overall Morningstar Rating™ is shown for share classes achieving a rating of 4 or 5 stars.

Glossary

Historic Yield
The Historic Yield reflects distributions declared over the past 12 months as a percentage of the mid-market share price, as at the date shown.

Standard deviation
A statistic that measures the variation or dispersion of a set of values/data. A low standard deviation shows the values tend to be close to the mean while a high standard deviation indicates the values are more spread out. In terms of valuing investments, standard deviation can provide a gauge of the historical volatility of an investment.

Tracking error
This measures how far a portfolio's actual performance differs from its benchmark index. The lower the number, the more closely it resembles the index.
