STRATEGIC BOND FUND

I Acc ISIN GB0007533820

Investment objective

The Fund aims to provide a return, from a combination of income and capital growth over the long term. Performance target: To outperform the IA Sterling Strategic Bond sector average, after the deduction of charges, over any 5 year period.

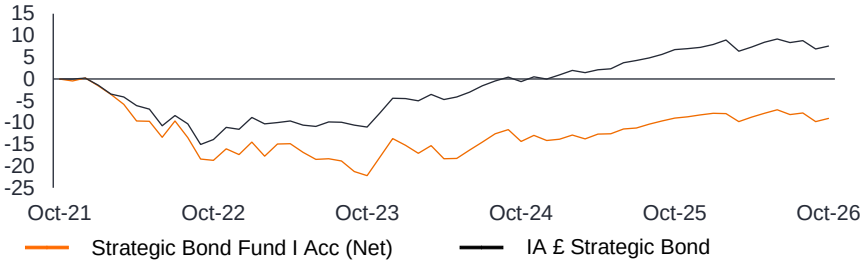

For the fund's investment policy, refer to the Additional fund information on page 3.
Past performance does not predict future returns.

B	23.64
Below B	1.10
NR	1.43

Bond credit quality ratings provided by Janus Henderson Investors are based on the average of ratings from Moody's, Standard & Poor's and Fitch where all three agencies have provided a rating. If less than 3 agencies rate a security, the average of those are used. Ratings are measured on a scale that ranges from Aaa (highest) to B, any lower ratings are grouped into 'Below B' (lowest).

Fees & charges (%)

Annual management charge (AMC)	0.60
Ongoing charge (OCF)	0.70

All ongoing charges stated are as per latest published report and accounts.

Fund charges will impact the value of your investment. In particular, the ongoing charges applicable to each fund will dilute investment performance, particularly over time. For further explanation of charges please visit our Fund Charges page at www.janushenderson.com.

Under some circumstances initial charges may apply. Please refer to the Prospectus for more details.

Ratings & Awards

For the source and information on ratings and awards shown above, refer to Source for fund ratings/awards.

Additional fund information

Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. Since inception performance relates to the period from Nov 2003. Performance achieved prior to this date is not representative of the fund's current strategy. Sector Breakdown: Preference Shares value includes Nationwide CCDS (core capital deferred share) and Cash includes the present value of FX contracts. As of 1 August 2026, John Lloyd and Oliver Bardot, CFA, have been appointed as co-managers of this fund. Fund size at 12pm on last business day of month. 100% of the Annual Management Charge is taken from capital. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. Performance for the share class is calculated at 12pm and performance of the index is calculated as at close of business. Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations. The month-end duration of the fund (in years) is shown on page 2. Duration measures the sensitivity of a bond fund to interest rate changes; the larger the figure, the more sensitive is the bond fund to a movement in interest rates. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund. Cash balances and exposures are based on settled and unsettled trades as at the reporting date.
The Investment Association (IA) groups funds with similar geographic and/or investment remit into sectors. The Fund's ranking within the sector (as calculated by a number of data providers) forms the basis of the Fund's performance target and can be a useful performance comparison against other funds with similar aims.

Investment policy

The Fund invests in a global portfolio of bonds of any quality, including high yield (non-investment grade) bonds, issued by governments or companies. Where investments are made in assets in currencies other than the base currency of the Fund, the Fund will seek to hedge those assets back to the base currency to remove the risk of currency exchange rate movements. The Fund may also hold other assets including bonds of other types from any issuer, preference shares, Collective Investment Schemes (including those managed by Janus Henderson), cash and money market instruments. In certain market conditions, the Fund may invest more than 35% of its assets in government bonds issued by any one body. The Investment Manager may use derivatives (complex financial instruments), including total return swaps, with the aim of making investment gains in line with the Fund's objective, to reduce risk or to manage the Fund more efficiently. The Fund is actively managed with reference to the IA Sterling Strategic Bond sector average, which is based on a peer group of broadly similar funds, as this forms the basis of the Fund's performance target. The Investment Manager has complete freedom to choose individual investments for the Fund and to vary allocations between different types of bonds.

Investment strategy

The Fund follows a flexible strategy to construct a diverse portfolio of investments from across the spectrum of fixed income assets. The Investment Manager actively varies the allocation to different types of bonds to suit the prevailing economic environment, based on careful macroeconomic research and credit analysis. At times in the market cycle, the fund will be expected to have higher interest rate sensitivity, which may result in significant underperformance or outperformance, particularly when government bond yields move more quickly or to a greater extent than anticipated. The Investment Manager adopts this approach as it is believed this can be beneficial for long-term performance.

Fund specific risks

An issuer of a bond (or money market instrument) may become unable or unwilling to pay interest or repay capital. If this happens or the market perceives this may happen, the value of the bond will fall. When interest rates rise (or fall), the prices of different securities will be affected differently. In particular, bond values generally fall when interest rates rise (or are expected to rise). This risk is typically greater the longer the maturity of a bond investment. When interest rates rise (or fall), the prices of different bonds will be affected differently. In particular, bond prices generally fall when interest rates rise or are expected to rise. This is especially true for bonds with a higher sensitivity to interest rate changes. A material portion of the fund may be invested in such bonds (or bond derivatives), so rising interest rates may have a negative impact on fund returns. While high yield (non-investment grade) bonds generally offer higher rates of interest than investment grade bonds, they are more speculative and more sensitive to adverse changes in market conditions. CoCos can fall sharply in value if the financial strength of an issuer weakens and a predetermined trigger event causes the bonds to be converted into shares/units of the issuer or to be partly or wholly written off. High exposure to a particular country or geographical region carries a higher level of risk than a more broadly diversified portfolio. Derivatives may be used to help achieve the investment objective. This can result in leverage (higher levels of debt), which can magnify an investment outcome. Gains or losses may therefore be greater than the cost of the derivative. Derivatives also introduce other risks, in particular, that a derivative counterparty may not meet its contractual obligations. When the Fund, or a share/unit class, seeks to mitigate exchange rate movements of a currency relative to the base currency (hedge), the hedging strategy itself may positively or negatively impact the value of the Fund due to differences in short-term interest rates between the currencies. Securities could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses. An issuer of a bond (or money market instrument) may become unable or unwilling to pay interest or repay capital. If this happens or the market perceives this may happen, the value of the bond will fall. High yielding (non-investment grade) bonds are more speculative and more sensitive to adverse changes in market conditions. Some or all of the ongoing charges and other costs of the Fund may be taken from capital, which may erode capital or reduce potential for capital growth. Losses could be incurred if a counterparty became unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider. Mortgage-backed securities (MBS), non-agency mortgage-related securities, credit risk transfer securities, and TBA commitments involve specific risks. These include borrowers failing to make payments (credit risk), changes in interest rates affecting repayment timing, and market conditions that may make selling these investments harder. Investments in Collateralised Loan Obligations (CLOs), are investments backed by pools of company loans, which may be affected if borrowers fail to repay their loans, interest rates change, or market conditions worsen. CLOs can be difficult to sell during periods of market stress, which may reduce income and increase losses. Credit ratings are opinions only and do not guarantee performance or protect against loss. Even highly rated CLOs can fall in value. Returns also depend on the decisions of the CLO manager. CLOs have their own operating costs, which are borne indirectly by investors in addition to the Fund's fees. Some bonds (callable bonds) allow their issuers the right to repay capital early or to extend the maturity. Issuers may exercise these rights when favourable to them and as a result the value of the Fund may be impacted. The sustainability approach applied may exclude potential investments which do not meet certain criteria (e.g. non-financial criteria such as ESG screens). This may cause differences in performance compared to similar products that are permitted to invest in those investments.

Source for fund ratings/awards

Where available, overall Morningstar Rating™ is shown for share classes achieving a rating of 4 or 5 stars. Fund Research Centre's endorsement indicates that the fund has been assessed according to its proprietary research framework (www.fundresearchcentre.co.uk). It should not be interpreted as an indication of expected performance or risk, or a recommendation to buy or sell any product or service. Fund Research Centre's service is designed to support financial advisers and institutions, and it does not constitute investment advice. The research is produced independently, based on sources believed to be reliable, and views may change without notice. The value of investments can fall as well as rise, and any income from them is not

guaranteed. This fund has been rated by Fund Research Centre as at 01/09/2025. Ranges that have successfully gone through the RSMR's rigorous and robust methodology will be awarded their Rated Fund Range designation. In giving this rating, RSMR are confirming that their research shows Janus Henderson Investors to have a sound investment process for the fund range, and that their analysis of the performance and risk of the range of funds is in line with their expectations. One of the primary reasons for separating out ranges from the sector funds that form RSMR's usual reviews is to provide a simpler process for advisers and provide analysis and guidance from a more practical perspective. By assessing the core processes against objectives and targets rather than emphasising the peer group, RSMR feel they can identify those fund ranges in a way that advisers can then utilise across a range of clients or risk profiles more effectively and consistently. All the fund ranges that have been awarded a rating will be listed on the RSMR website, where you will also find a factsheet for each range. All this information should enable you to understand the fund ranges that are available, and the key differences between them, meaning you can then determine which, if any, is most suitable for you. This fund has been rated by RSMR as at 01/01/2026. https://www.rsmr.co.uk.

Glossary

Discount
When the market price of a security is thought to be less than its underlying value, it is said to be 'trading at a discount'. Within investment trusts, this is the amount by which the price per share of an investment trust is lower than the value of its underlying net asset value. The opposite of trading at a premium.

Distribution Yield
The Distribution Yield reflects the amounts that may be expected to be distributed over the next 12 months as a percentage of the mid-market share price of the fund at the date shown.

Duration
Duration can measure how long it takes (in years) for an investor to be repaid a bond's price by the bond's total cash flows. Duration can also measure the sensitivity of a bond's or fixed-income portfolio's price to changes in interest rates. The longer a bond's duration, the higher its sensitivity to changes in interest rates, and vice versa. 'Going short duration' refers to reducing the average duration of a portfolio, while 'going long duration' refers to extending a portfolio's average duration.

Future
A contract between two parties to buy or sell a tradable asset, such as shares, bonds, commodities or currencies, at a specified future date at a price agreed today. A future is a form of derivative.

Gilts
British government bonds sold by the Bank of England, done to finance the British national debt.

High yield bond
A bond which has a lower credit rating below an investment grade bond. It is sometimes known as a sub-investment grade bond. These bonds usually carry a higher risk of the issuer defaulting on their payments, so they are typically issued with a higher coupon to compensate for the additional risk.

Option
A derivative instrument where one party pays/receives the total return of the underlying asset or market index, in exchange for payments typically linked to LIBOR.

Swaps
A derivative contract between two parties where pre-determined cash flows of two financial instruments are exchanged. Swaps can help to hedge risk and minimise uncertainty; for example currency swaps can be used to minimise foreign currency exposure.

Underlying Yield
The Underlying Yield reflects the annualised income net of expenses of the fund (calculated in accordance with relevant accounting standards) as a percentage of the mid-market share price of the fund at the date shown.

Weighted Average Life (WAL)
The average time taken (in years) for the principal to be repaid for securitised assets, or the probable time to maturity for non-securitised assets. Securitised assets, also known as 'asset backed' securities, represent a pool of other interest bearing assets such as loans and mortgages. The value is based on the cash flows of the underlying assets.

Yield to worst
The lowest yield a bond with a special feature (such as a call option) can achieve provided the issuer does not default. When used to describe a portfolio, this statistic represents the weighted average across all the underlying bonds held.
