Dear Shareholder,

This report covers the six months from 1 February to 31 July 2026. It was a good period for the North American Income Trust ("NAIT" or the "Company"), with the net asset value ("NAV") rising 13.6% and the share price rising more strongly still at 17.3% on a total return basis.

Our goals for NAIT are to deliver both a higher level of income than is generally available on North American equities and grow our shareholders' wealth by securing long-term capital growth. This dual mandate – income and growth – makes it difficult to compare our performance to that of the main American stock market indices because the typical yield on American equities is much lower than that on NAIT's shares. Instead, we suggest performance is compared to indices that comprise stocks offering a more comparable yield to NAIT. The two chosen indices are the Russell 1000 Value Index and the S&P High Yield Dividend Aristocrat Index.

For the six months to 31 July 2026, the total return on the Russell 1000 Value Index (in sterling terms) was 17.7% and the total return on the S&P High Yield Dividend Aristocrat Index (again in sterling terms) was 7.9%. NAIT has therefore fallen short of the former but comfortably exceeded the latter.

The positive returns are welcome but belie a volatile and difficult environment. Most notably, the United States engaged Iran in direct military conflict, starting in March. This conflict, which has yet to be resolved, caused significant disruption in

global oil supplies and, consequently, a sharp rise in the price of oil. Stock markets fell sharply on the outbreak of hostilities and although they have recovered since, these events continue to weigh on sentiment. More generally, policy-making by the current US administration appears, to most observers, to be as capricious. The artificial intelligence revolution also continues to unfold. Like all waves of technological innovation, AI presents us with both opportunity and threat, and it has, at times, been hard to judge where the balance lies.

However, the US economy has continued to expand, fuelled in no small part by the capital expenditure associated with investment into artificial intelligence and the data centres and computing power that it requires. The US consumer has also been strong. Sales and profits of US listed companies have therefore continued to grow briskly, and this has been enough to push share prices to new highs.

The net effect of these developments was to deliver a market that first fell sharply in the opening two months of the period before then recovering and rising to new all-time highs. A reminder, if it was needed, that stock markets reward patience and a long-term investment outlook.

Revenue Account

The strong environment for profits is encouraging companies to raise their dividends, and the Company's portfolio is benefiting from this. As a result, the revenue return rose to 7.28p, 21.9% higher than in the comparable period last year.

With all our income generated outside of the UK, and predominantly in US dollars, the revenue return is sensitive to changes in the pound/dollar exchange rate. When the pound falls against the dollar, the value of our dollar income rises and, conversely, when the pound rises, the value of our dollar income falls. For the six months to 31 July, sterling fell from against the dollar, from $1.37 to $1.35. However, looking at the average exchange rate for the six months and comparing it to the same period a year ago, sterling strengthened slightly.

Dividend

The Board declared a first interim dividend of 3.0p on 17 June 2026 and we are pleased now to declare a second interim dividend, also of 3.0p, bringing the total for the half-year to 6.0p. This is a 7.1% increase on same period last year. The second dividend will be paid on 30 October 2026 to shareholders on the register on 2 October 2026.

Management of Premium and Discount

The Company's share price ended the half-year at 438.0p, a 2.3% discount to the net asset value (with debt at fair value). This compares to a 5.7% discount to the net asset value (with debt at fair value) at the start of the half-year period. At these levels of discount, there was less need for the Company to be active in the market and share re-purchases were at a much lower level compared to prior periods. During the half year ended 31 July 2026, 50,554 shares were bought back at an average price of 390.8p and an average discount of 7.7%. No shares have been bought back since 31 July 2026.

These share buybacks took the total number of shares held in treasury to 12.2 million approximately 9.6% of the issued share capital. Should the share price continue to trade strongly relative to net asset value and a premium emerge, NAIT will re-issue these shares by selling into the secondary market. Conversely, should the discount widen again, NAIT will resume share buybacks.

Gearing

NAIT, like many investment trusts, benefits from being able to borrow funds for investment. The Company has long-term financing arrangements in place (with Metlife) that total US$50m, comprising one loan note of $25m maturing in December 2030 and another, also of $25m, maturing in December 2035.

Since the loan notes were issued, in December 2020, the borrowed capital has been fully invested and the returns on those investments have significantly outweighed the annual borrowing costs. The Board regularly reviews borrowing levels and the extent to which borrowed funds are actively deployed, taking into account equity valuations, prospective returns and the Company's borrowing costs. Net gearing at 31 July 2026 was 5.8%.

The Manager

On 30 June 2026, NAIT's manager Janus Henderson changed ownership and went from being a publicly listed company to being privately owned. The Board has engaged with Janus Henderson to understand the impact of this change on NAIT. We are confident the ownership change will enhance the support and investment capabilities provided to NAIT and we therefore view the change positively.

Board Activity

On 17 June 2026, after nine years as a director of the Company and two years as chairman, Charles Park retired from the Board. On the same date, I took on the role of chairman and Susannah Nicklin was appointed as the Senior Independent Director.

I want to thank Charles for his dedication to the Company throughout his time as a director and as chairman. His clear thinking and wise counsel were highly valued, and I am particularly grateful for the contribution he made during and

after the transition, in 2024, from our previous manager to Janus Henderson.

The appointment of Janus Henderson has proven very beneficial to the Company and the Board has, over the last two years, developed a strong and constructive relationship with its new manager.

We are very aware that our duty and allegiance is to NAIT and its shareholders. We hope for an open dialogue with all shareholders and I encourage you to contact the Board at any point to share views and raise any questions you might have via the Corporate Secretary. Contact details can be found in note 15 below.

Outlook

As an investment vehicle focused on North American equities, NAIT is inevitably exposed to the ups and downs of the US economy and the vagaries of US political decision making. Economic growth in the US has been driven by capex related to artificial intelligence and a buoyant consumer. There is no guarantee these supports will remain in place. We should also acknowledge that the US stock market trades on an historically high valuation.

All this said, the companies in NAIT's portfolio are performing well operationally and consensus forecasts point to continued growth in their profits and dividend payouts. These companies typically trade on a lower valuation multiple than the US market and our managers, when making their investment decisions, place emphasis on factors such as business resilience, balance sheet strength and cash generation. These features give us confidence that NAIT can continue to be a rewarding long term investment for investors seeking income and growth.

Fund Managers' report

Fran Radano
Jeremiah Buckley
Co-Fund Managers

Summary

- The first half of 2026 was another strong period for US equities with the underlying economy proving to be more resilient than many anticipated.
- NAIT delivered an NAV total return between the Russell 1000 Value Index and the S&P High Yield Dividend Aristocrats Index.
- Beyond AI, we remain excited by the innovation and productivity gains being driven by large US companies as their scale helps them to generate predictable cash flows that can be reinvested in their businesses.

Market review

The first half of 2026 was another strong period for US equities, although that outcome probably looked far from certain at several points along the way. Markets had to absorb a steady stream of challenges, including tighter immigration policies, political uncertainty in Washington, renewed conflict in the Middle East and the resulting rise in energy prices. Inflation remained above the Federal Reserve's (Fed) 2% target and risks undoubtedly persist.

However, the underlying economy continued to prove more resilient than many anticipated. Corporate balance sheets remained healthy, loan growth supported ongoing business investment and company earnings continued to surprise on the upside. Second-quarter earnings marked the seventh consecutive quarter of double-digit growth, with revenues rising by more than 15% and earnings increasing by an impressive 34%, excluding unrealised gains. Perhaps more importantly, that strength was not confined to a handful of sectors. Median earnings growth was 14%, with almost every part of the market delivering at least high-single-digit growth.

While hiring slowed, unemployment remained relatively low and the US economy continued to operate in what has become a "low hiring, low firing" environment. Inflationary pressures have not fully disappeared and geopolitical uncertainty could yet have wider economic consequences, but the prospect of a more severe slowdown appeared less likely than it did earlier in the period. Corporate fundamentals remained broadly healthy, investment spending continued and the

economy again showed an impressive ability to absorb shocks.

Beneath the headline returns, however, there were really two markets at work. On one side were a relatively small number of companies benefiting from investment in artificial intelligence. Stocks such as Microsoft, Amazon and Apple, together with semiconductor and technology infrastructure businesses including Micron Technology, Marvell Technology and Western Digital, generated particularly strong returns. Many pay little or no dividend and therefore sit outside NAIT's natural hunting ground.

Their influence increased further following the annual Russell index reconstitution in late June, which added some of these companies to the Russell 1000 Value Index or increased their representation within it. On the other side were the dividend-paying businesses more commonly found in income portfolios. Companies such as Dell Technologies, CVS Health and Lamar Advertising delivered strong returns, helping the portfolio produce a solid result and comfortably outperform the S&P High Yield Dividend Aristocrats Index.

Performance

The wide divergence between these two parts of the market was reflected in the returns from the reference indices we use to assess performance. The Russell 1000 Value Index returned 17.7% in sterling terms over the six months to 31 July 2026, while the S&P High Yield Dividend Aristocrats Index returned 7.9%. NAIT's NAV total return of 13.6% sat between the two, while shareholders received a share price total return of 17.3% as the discount narrowed to approximately 2.3% (with debt at fair value) at the end of the period.

The S&P High Yield Dividend Aristocrats Index is particularly relevant when considering performance against NAIT's income-focused remit. It is also the index used to assess the NAV performance condition attached to the Company's conditional 15% tender offer. NAIT outperformed this index by 5.7 percentage points during the period, while its return was 4.1 percentage points below that of the Russell 1000 Value Index.

The comparison with the Russell 1000 Value Index requires some context, but it should not obscure what was, in our view, a good first half for the portfolio. Low- and non-dividend-paying companies outside NAIT's normal investment universe accounted for more than the entirety of the relative shortfall against that index. This does not mean that every decision within the portfolio worked as intended, but it does illustrate the effect that the unusually strong performance of these companies had on the comparison.

Several holdings delivered strong returns. Dell Technologies benefited from continued demand for data-centre infrastructure and ongoing market-share gains. CVS Health performed well as investors became more positive about its earnings outlook, while Lamar Advertising continued to execute strongly and generate resilient cash flows. Financial holdings also contributed as lending growth accelerated, while energy companies benefited from higher energy prices and robust earnings.

Not all holdings participated in the market's advance. Zoetis, the animal health company, was affected by increased

competition from a new market entrant and an unusual reduction in veterinary visits. Changing patterns of pet ownership also played a part following the post-pandemic "dog boom". We continue to regard Zoetis as a strong franchise, although we have not added to the holding and continue to assess the investment case at its current valuation.

Nike was another disappointment. The anticipated recovery has continued to be pushed out and, although we recognise the underlying value of the brand, we believe there are now more attractive opportunities elsewhere. We therefore exited the position.

Microsoft was a more unusual source of relative underperformance. The company was not part of the Russell 1000 Value Index before the reconstitution on 26 June, and we held a position of approximately 1%. When Microsoft entered the index at a weight of around 4%, we increased the holding to approximately 1.6%, and it has since risen close to 2% of the portfolio. Nevertheless, NAIT remained underweight when the shares gained approximately 25% following strong quarterly results, causing Microsoft's index weight to rise to around 5%. That underweight position was therefore a significant influence on relative performance during the final weeks of the period.

Looking beyond a single index comparison, we believe the portfolio delivered a good result within its remit, comfortably outperforming the Dividend Aristocrats Index while continuing to provide exposure to businesses capable of delivering long-term capital growth and a progressive dividend. Our task is not to replicate the entire market, particularly where companies offer little or no income, but neither do we dismiss opportunities simply because they sit within a high growth, low dividend industry. Microsoft, which offers a respectable dividend yield among the large technology names discussed above, is a good example of that more balanced approach.

We remain disciplined in our approach and believe selectivity is particularly important in today's market. While valuations have become demanding in some areas, we continue to find high-quality businesses with strong fundamentals, growing dividends and more sensible valuations elsewhere.

Portfolio changes

Portfolio activity was relatively muted during the period, reflecting our long-term investment approach. Most changes involved modest adjustments to existing holdings rather than significant shifts in positioning. Periods of elevated market volatility occasionally created opportunities to add to favoured holdings at more attractive valuations, and we selectively took advantage of these dislocations when we believed share price moves had become disconnected from underlying fundamentals.

Earlier in the period, we initiated positions in Marsh McLennan, the global insurance and risk management business, and Danaher, the healthcare and life sciences company. In Danaher's case, we were pleased to re-establish a holding after previously exiting the position following a strong run in the share price. When the shares subsequently returned to a level we considered attractive, we took the opportunity to re-enter the stock.

Markets rarely move in unison and, while investor enthusiasm has pushed valuations

to demanding levels in some areas, there remain plenty of opportunities for patient investors prepared to look elsewhere.

Outlook

The markets have remained incredibly resilient over the past year and, while we are surely not expecting smooth sailing as the midterm elections approach, there are some structural changes to the US economy that should position it well for the future.

Core among these are changes in the new fiscal policy that allow the immediate expensing of capital projects and research and development. This has encouraged companies to invest properly in their businesses and act as long-term owners, just as we do as shareholders. Additionally, a wave of deregulation should improve the operating environment across multiple industries. Financial companies in particular should benefit, as greater flexibility may allow excess capital to be redeployed into more productive uses and, theoretically, permeate across the wider economy. Of course, energy remains a wildcard and forms an important part of our risk assessment, particularly we are considering its potential effect on inflation.

The AI infrastructure build remains a core theme within the portfolio, although we have pared some positions as hyperscalers continue to evaluate the returns on their investment. We expect growth in this area may become more disciplined from here. While AI adoption is still at an early stage, its potential to have a significant impact on productivity and revenue growth is clear, and we continue to see positive use cases across healthcare, e-commerce, finance and energy.

Beyond AI, we remain excited by the innovation and productivity gains being driven by large US companies as their scale helps them to generate predictable cash flows that can be reinvested in their businesses. The investment required to succeed in the new digital economy is significant and therefore tends to favour the largest companies within their industries. We have populated the portfolio with businesses that have the scale to make these investments, which should help drive future growth in earnings and dividends.

The consumer continues to spend, supported by high employment and consistent wage growth. However, we have seen a slowdown in new job creation and inflation is still running above trend across many parts of the economy. Housing also remains a lagging sector because of high interest rates and the lack of mortgage portability, but we believe there is pent-up demand for housing and residential investment that has the potential to drive growth in the future.

We continue to believe the companies in the portfolio are well positioned to manage through periods of volatility. In aggregate, they trade at approximately 16 times forward earnings, a comfortable discount to broader market multiples despite comprising what we believe to be a well-diversified group of high-quality businesses. Their robust balance sheets and predictable cash flows should help insulate them from some of the macroeconomic forces at play, while supporting continued dividend growth through 2026 and beyond.

As always, we seek to populate the portfolio with resilient companies that can invest prudently for the future and are not

dependent on macroeconomic tailwinds as their primary driver of growth. We thank shareholders for their continued confidence in our ability to act as thoughtful stewards of their capital and seek to reward them through a combination of income and long-term capital growth.

Dividends

The Company has declared an interim dividend of 3.0p per ordinary share ("share")(31 July 2025: 2.8p) payable on 30 October 2026 to shareholders on the register as at 2 October 2026. The shares will trade ex-dividend on 1 October 2026.

A fourth interim dividend of 4.4p per share was paid on 27 May 2026 from the Company's revenue account in respect of the year ended 31 January 2026. A first interim dividend of 3.0p per share was paid on 31 July 2026 from the Company's revenue account in respect of the year ending 31 January 2027.

Going concern

The assets of the Company consist mainly of securities, most of which are readily realisable and, accordingly, the Company has adequate financial resources to continue in operational existence for at least twelve months from the date of approval of the financial statements. The Directors have also considered the impact of geopolitical developments and believe that there will be a limited resulting financial impact on the Company's portfolio, its operational resources and existence. Having assessed these factors and the principal risks, the Directors have determined that it is appropriate for the financial statements to be prepared on a going concern basis.

Principal risks and uncertainties

The principal risks and uncertainties associated with the Company's business can be divided into the following main areas:

- Strategy and investment performance
- Market events and geopolitical risk
- Income and dividend risk
- Gearing
- Discount volatility
- Operational and cyber-security
- Regulatory and reporting

Information on these risks and how they are managed is given in the Annual Report for the year ended 31 January 2026. In the view of the Board, these principal risks and uncertainties continue to apply and are as applicable to the remaining six months of the financial year as they were to the six months under review.

Statement of Directors' Responsibilities

The Directors (as listed on page 18) confirm that, to the best of their knowledge:

a. the unaudited condensed set of financial statements for the half-year to 31 July 2026 has been prepared in accordance with "FRS 104 Interim Financial Reporting" and gives a true and fair view of the assets, liabilities, financial position and profit or loss of the Company;

b. the interim management report and condensed financial statements include a fair review of the information required by Disclosure Guidance and Transparency Rule 4.2.7R (indication of important events during the first six months and description of principal risks and uncertainties for the remaining six months of the year); and

c. the interim management report includes a fair review of the information required by the Disclosure Guidance and Transparency Rule 4.2.8R (disclosure of related party transactions that have taken place in the first six months of the current financial year and that have materially affected the financial position or the performance of the Company during the period; and any changes in related party transactions described in the latest annual report that could have an impact in the first six months of the current financial year).

Investing

Shares can be purchased in the market via a stockbroker or through share dealing platforms. They can also be held through share plans, ISAs or pensions, and links to various providers are included on the website.

Potential investors are reminded that the value of investments and the income from them may go down as well as up and investors may not get back the full amount invested. Tax benefits may vary as a result of statutory changes and their value will depend on individual circumstances.
