Janus Henderson
INVESTORS

Returns include reinvestment of dividends and capital gains. Returns greater than one year are annualized.

There is no assurance the stated objective(s) will be met.

Sectors are defined by Janus Henderson and will vary from standard classifications. Equity country, regional and industry weights based on MSCI classifications. Fixed income country, regional and industry weights based on Bloomberg Barclays classifications.

Investing involves risk, including the possible loss of principal and fluctuation of value.

Foreign securities are subject to additional risks including currency fluctuations, political and economic uncertainty, increased volatility, lower liquidity and differing financial and information reporting standards, all of which are magnified in emerging markets.

Fixed income securities are subject to interest rate, inflation, credit and default risk. The bond market is volatile. As interest rates rise, bond prices usually fall, and vice versa. The return of principal is not guaranteed, and prices may decline if an issuer fails to make timely payments or its credit strength weakens.

No investment strategy, including an absolute return strategy, can ensure a profit or eliminate the risk of loss. An absolute return strategy may result in underperformance during a bull market.

Derivatives can be highly volatile and more sensitive to changes in economic or market

conditions than other investments. This could result in losses that exceed the original investment and may be magnified by leverage.

Index performance does not reflect the expenses of managing a portfolio as an index is unmanaged and not available for direct investment.

FTSE 3-Month US Treasury Bill Index tracks the performance of short-term U.S. government debt securities. **Standard Deviation** measures historical volatility. Higher standard deviation implies greater volatility. **Sharpe Ratio** measures risk-adjusted performance using excess returns versus the "risk-free" rate and the volatility of those returns. A higher ratio means better return per unit of risk. **Duration** measures a bond price's sensitivity to changes in interest rates. The longer a bond's duration, the higher its sensitivity to changes in interest rates and vice versa.
