Holdings are subject to change without notice. Equity country, regional, sector and industry weights based on MSCI and GICS classifications. Fixed income country, regional, sector and industry weights based on Bloomberg Barclays classifications.

Investing involves risk, including the possible loss of principal and fluctuation of value.

Fixed income securities are subject to interest rate, inflation, credit and default risk. The bond market is volatile. As interest rates rise, bond prices usually fall, and vice versa. The return of principal is not guaranteed, and prices may decline if an issuer fails to make timely payments or its credit strength weakens.

Growth stocks are subject to increased risk of loss and price volatility and may not realize their perceived growth potential.

Index performance does not reflect the expenses of managing a portfolio as an index is unmanaged and not available for direct investment.

The Refinitiv Lipper Fund Awards, granted annually, highlight funds and fund companies that have excelled in delivering consistently strong risk-adjusted performance relative to their peers. The Refinitiv Lipper Fund Awards are based on the Lipper Leader for Consistent Return rating, which is a risk-adjusted performance measure calculated over 36, 60 and 120 months. The fund with the highest Lipper Leader for Consistent Return (Effective Return) value in each eligible classification wins the Refinitiv Lipper Fund Award. For more information, see lipperfundawards.com. 123 Mixed-Asset Target Allocation Moderate Funds were eligible for this award for the 5-year period ending 11/30/20. Lipper Fund Awards based on Janus Henderson Balanced Fund Class N shares only. Only eligible investors may purchase Class N Shares. See a prospectus for eligibility requirements and other available share classes. Other share classes may have different performance characteristics. S&P 500® Index reflects U.S. large-cap equity performance and represents broad U.S.

equity market performance. **Bloomberg Barclays U.S. Aggregate Bond Index** is a broad-based measure of the investment grade, US dollar-denominated, fixed-rate taxable bond market. **Balanced Index** is an internally-calculated, hypothetical combination of total returns from the S&P 500® Index (55%) and the Bloomberg Barclays U.S. Aggregate Bond Index (45%). **Alpha** compares risk-adjusted performance relative to an index. Positive alpha means outperformance on a risk-adjusted basis. **Beta** measures the volatility of a security or portfolio relative to an index. Less than one means lower volatility than the index; more than one means greater volatility. **R-squared (R²)** measures the relationship between portfolio and index performance on a scale of 0.00 (0%) to 1.00 (100%). A higher R² indicates more of the portfolio's performance is affected by market movements and vice versa. **Standard Deviation** measures historical volatility. Higher standard deviation implies greater volatility. **Sharpe Ratio** measures risk-adjusted performance using excess returns versus the "risk-free" rate and the volatility of those returns. A higher ratio means better return per unit of risk. **Duration** measures a bond price's sensitivity to changes in interest rates. The longer a bond's duration, the higher its sensitivity to changes in interest rates and vice versa.
