Portfolio Construction Insight

Traditional Equity
Mid-Cap Growth Exposure

Why Invest

- ▶ Takes a moderate approach to an often volatile asset class by focusing on companies with sustainable growth potential
- ▶ Aims for less risk than the majority of peers and the index
- ▶ Backed by a specialized team of small- and mid-cap portfolio managers and analysts

Portfolio Management

Brian Demain, CFA
Manager since 2007

Cody Wheaton, CFA
Manager since 2016

Fund Overview

Objective: **Long-term growth of capital**

Morningstar Category: **Mid-Cap Growth**

INVESTORS

Closed to certain new investors.

Index represents the Russell Midcap® Growth Index.

Performance for Class D Shares that includes periods prior to 2/16/10 reflects the performance of one or more share classes of the Fund or a predecessor fund, adjusted, where applicable and permitted, for differing fees and expenses. See the Fund's prospectus for further details.

Returns include reinvestment of dividends and capital gains. Returns greater than one year are annualized.

Holdings are subject to change without notice.

There is no assurance the stated objective(s) will be met.

Equity country, regional, sector and industry weights based on MSCI and GICS classifications. Fixed income country, regional, sector and industry weights based on Bloomberg Barclays classifications.

Investing involves market risk and it is possible to lose money by investing. Investment return and value will fluctuate in response to issuer, political, market and economic developments, which can affect a single issuer, issuers within an industry, economic sector or geographic region, or the market as a whole.

Smaller capitalization securities may be less stable and more susceptible to adverse developments, and may be more volatile and less liquid than larger capitalization securities.

Growth stocks are subject to increased risk of loss and price volatility and may not realize their perceived growth potential.

Derivatives can be highly volatile and more sensitive to changes in economic or market conditions than other investments. This could result in losses that exceed the original investment and may be magnified by leverage.

Index performance does not reflect the expenses of managing a portfolio as an index is unmanaged and not available for direct investment.

Russell Midcap® Growth Index reflects the performance of U.S. mid-cap equities with higher price-to-book ratios and higher forecasted growth values. **Alpha** compares risk-adjusted performance relative to an index. Positive alpha means outperformance on a risk-adjusted basis. **Beta** measures the volatility of a security or portfolio relative to an index. Less than one means lower volatility than the index; more than one means greater volatility. **R-squared (R²)** measures the relationship between portfolio and index performance on a scale of 0.00 (0%) to 1.00 (100%). A higher R² indicates more of the portfolio's performance is affected by market movements and vice versa. **Standard Deviation** measures historical volatility. Higher standard deviation implies greater volatility. **Sharpe Ratio** measures risk-adjusted performance using excess returns versus the "risk-free" rate and the volatility of those returns. A higher ratio means better return per unit of risk. **Active Share** represents the portion of portfolio holdings that differ from an index. **Turnover** is a measure of portfolio trading activity. Higher turnover may indicate higher transaction costs and vice versa.

Please consider the charges, risks, expenses and investment objectives carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, please call Janus Henderson at 800.525.3713 or download the file from janushenderson.com/reports. Read it carefully before you invest or send money.
