Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Market returns are based upon the midpoint of the bid/ask spread at 4:00 p.m. Eastern time (when NAV is normally determined for most ETFs), and do not represent the returns you would receive if you traded shares at other times. Ordinary brokerage commissions apply and will reduce returns.

ETF shares are not individually redeemable and owners of the shares may acquire those shares from the Fund and tender those shares for redemption to the Fund in Creation Units only.

Returns include reinvestment of dividends and capital gains. Returns greater than one year are annualized.

OBJECTIVE: Janus Henderson Short Duration Income ETF (VNLA) seeks to provide a steady income stream with capital preservation across various market cycles. The Fund seeks to consistently outperform the FTSE 3-Month U.S. Treasury Bill Index by a moderate amount through various market cycles while at the same time providing low volatility.

The Fund is not a money market fund and does not attempt to maintain a stable net asset value.

INVESTORS

Holdings are subject to change without notice.

Industries are defined by Janus Henderson and reflect GICS classifications for corporate issuers and security type for non-corporate issuers.

Country classifications based on Bloomberg country of risk.

Investing involves risk, including the possible loss of principal and fluctuation of value. There is no assurance the stated objective(s) will be met.

Fixed income securities are subject to interest rate, inflation, credit and default risk. The bond market is volatile. As interest rates rise, bond prices usually fall, and vice versa. The return of principal is not guaranteed, and prices may decline if an issuer fails to make timely payments or its credit strength weakens.

Foreign securities are subject to additional risks including currency fluctuations, political and economic uncertainty, increased volatility, lower liquidity and differing financial and information reporting standards, all of which are magnified in emerging markets.

Derivatives can be highly volatile and more sensitive to changes in economic or market conditions than other investments. This could result in losses that exceed the original investment and may be magnified by leverage.

Actively managed portfolios may fail to produce the intended results. No investment strategy can ensure a profit or eliminate the risk of loss.

Index performance does not reflect the expenses of managing a portfolio as an index is unmanaged and not available for direct investment.

FTSE 3-Month U.S. Treasury Bill Index tracks the performance of short-term U.S. government debt securities.

Standard Deviation measures historical volatility. Higher standard deviation implies greater volatility. **Sharpe Ratio** measures risk-adjusted performance using excess returns versus the "risk-free" rate and the volatility of those returns. A higher ratio means better return per unit of risk.
