DIVERSIFIED GROWTH FUND

I Acc ISIN GB00BJTD6V58

Investment objective

The Fund aims to provide a return, from a combination of capital growth and income, with volatility lower than that of the MSCI ACWI Index, over the long term. Performance target: To outperform SONIA by 4% per annum, before the deduction of charges, over any 5 year period.

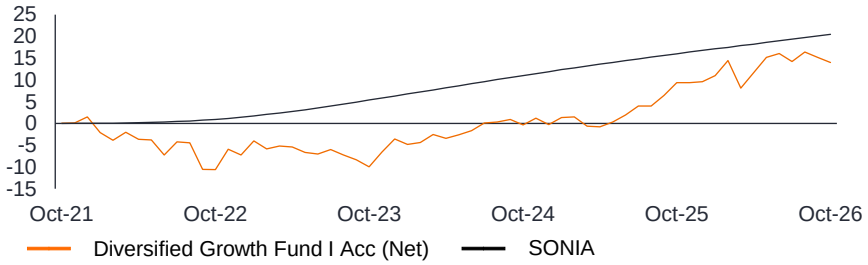

For the fund's investment policy, refer to the Additional fund information on page 3.
Past performance does not predict future returns.

Fees & charges (%)

Annual management charge (AMC)	0.55
Ongoing charge (OCF)	0.72

All ongoing charges stated are as per latest published report and accounts.

Fund charges will impact the value of your investment. In particular, the ongoing charges applicable to each fund will dilute investment performance, particularly over time. For further explanation of charges please visit our Fund Charges page at www.janushenderson.com.

Under some circumstances initial charges may apply. Please refer to the Prospectus for more details.

Additional fund information

Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. Please note the performance target is to be achieved over a specific annualised time period. Refer to the performance target wording within the objective. From 19 April 2021 the benchmark changed from 3 month GBP LIBOR Interest Rate to SONIA (Sterling Overnight Index Average). The Fund's investment policy and performance target changed. The past performance shown before this change was therefore achieved under circumstances that no longer apply. Fund size at 12pm on last business day of month. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. Performance for the share class is calculated at 12pm and performance of the index is calculated as at close of business. Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund. Cash balances and exposures are based on settled and unsettled trades as at the reporting date. SONIA stands for Sterling Overnight Index Average. SONIA reflects the average of the interest rates that banks pay to borrow sterling overnight from other financial institutions. The Bank of England is the administrator for SONIA and they are responsible for its governance and publication every London business day. It is the basis for the performance target of the fund.

Investment policy

The Fund invests in Collective Investment Schemes (other funds including those managed by Janus Henderson and Exchange Traded Funds) to provide diversified global exposure to a range of assets including shares (equities) of companies, bonds issued by companies and governments, and to a lesser extent, alternative assets such as property and commodities. The Fund may also invest in other assets including shares (equities), bonds, cash and money market instruments. The Investment Manager may use derivatives (complex financial instruments) with the aim of making investment gains in line with the Fund's objective, to reduce risk, or to manage the Fund more efficiently. The Fund is actively managed with reference to SONIA, as this forms the basis of the Fund's performance target. For currency hedged Share Classes, the rate that corresponds with the relevant Share Class currency is used as the basis of the performance comparison. The Investment Manager has complete discretion to choose investments for the Fund.

Investment strategy

The Investment Manager follows a strategy that combines strategic asset allocation (based on long-term return, risk and correlation expectations of various asset classes), dynamic asset allocation (giving the strategy the flexibility to reflect the team's shorter term market views and to react quickly in times of market stress), and careful underlying fund and instrument selection. The investment process is underpinned by a robust, multi-faceted approach to risk management. The strategy results in a portfolio with exposure to a wide variety of asset classes, both traditional and alternative, in the expectation that investors will benefit from the significant diversification benefits multi-asset investing provides.

Fund specific risks

Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result. An issuer of a bond (or money market instrument) may become unable or unwilling to pay interest or repay capital. If this happens or the market perceives this may happen, the value of the bond will fall. When interest rates rise (or fall), the prices of different securities will be affected differently. In particular, bond values generally fall when interest rates rise (or are expected to rise). This risk is typically greater the longer the maturity of a bond investment. The Fund invests in other funds (including exchange-traded funds and investment trusts/companies). This may introduce more risky assets, derivative usage and other risks associated with the underlying funds, as well as contributing to a higher level of ongoing charges. If the Fund holds assets in currencies other than the base currency of the Fund, or you invest in a share/unit class of a different currency to the Fund (unless hedged, i.e. seeks to mitigate exchange rate movements between the share/unit class currency and the base currency of the Fund), the value of your investment may be impacted by changes in exchange rates. Derivatives may be used to help achieve the investment objective. This can result in leverage (higher levels of debt), which can magnify an investment outcome. Gains or losses may therefore be greater than the cost of the derivative. Derivatives also introduce other risks, in particular, that a derivative counterparty may not meet its contractual obligations. When the Fund, or a share/unit class, seeks to mitigate exchange rate movements of a currency relative to the base currency (hedge), the hedging strategy itself may positively or negatively impact the value of the Fund due to differences in short-term interest rates between the currencies. Securities could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses. Losses could be incurred if a counterparty became unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider.

Source for fund ratings/awards

Where available, overall Morningstar Rating™ is shown for share classes achieving a rating of 4 or 5 stars.

Glossary

Historic Yield
The Historic Yield reflects distributions declared over the past 12 months as a percentage of the mid-market share price, as at the date shown.

Standard deviation
A statistic that measures the variation or dispersion of a set of values/data. A low standard deviation shows the values tend to be close to the mean while a high standard deviation indicates the values are more spread out. In terms of valuing investments, standard deviation can provide a gauge of the historical volatility of an investment.

Tracking error
This measures how far a portfolio's actual performance differs from its benchmark index. The lower the number, the more closely it resembles the index.
