Additional fund information

Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. Effective 1 July 2020, the benchmark of the Fund was changed from MSCI AC World Information Technology Index to MSCI ACWI Information Technology Index + MSCI ACWI Communication Services Index. Prior to that, the benchmark was changed from FTSE World Index to the MSCI AC World Information Technology Index on 1 May 2005. In accordance to the UCITS Directive the fund will not invest more than 10% of its assets in shares of a single company. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. This is a Luxembourg SICAV Fund, regulated by the Commission de Surveillance du Secteur Financier (CSSF). Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations. To obtain our prospectus and any additional information please visit our website on: www.janushenderson.com. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund. Cash balances and exposures are based on settled and unsettled trades as at the reporting date.

Overall Morningstar Rating™ is a measure of a fund's risk-adjusted return, relative to similar funds. Fund share classes are rated from 1 to 5 stars, with the best performers receiving 5 stars and the worst performers receiving a single star. Where available, overall Morningstar Rating™ is shown for share classes achieving a rating of 4 or 5 stars. For the Morningstar Rating category, refer to page 1 Morningstar sector. Ratings should not be taken as a recommendation. Glossary

Beta
Beta measures how a fund or security moves in relationship to the overall market. A market has a beta of 1. If the fund/security's beta is more than 1, it moves more than the market, while a beta lower than 1 means it moves to a lesser extent than the market. A negative beta could mean the fund/security moves in the opposite direction to the market.

Price-to-book (P/B) ratio
A financial ratio used to value a company's shares. It is calculated by dividing a company's market value (share price) by the book value of its equity (value of the company's assets on its balance sheet). A P/B value <1 can indicate a potentially undervalued company or a declining business. The higher the P/B ratio, the higher the premium the market is willing to pay for the company above the book (balance sheet) value of its assets.

Price-to-earnings (P/E) ratio
A popular ratio used to value a company's shares, compared to other stocks, or a benchmark index. It is calculated by dividing the current share price by its earnings per share.

Sharpe ratio
This measures a portfolio's risk-adjusted performance. A high Sharpe ratio indicates a better risk-adjusted return. The ratio is designed to measure how far a portfolio's return can be attributed to fund manager skill as opposed to excessive risk taking.

Standard deviation
A statistic that measures the variation or dispersion of a set of values/data. A low standard deviation shows the values tend to be close to the mean while a high standard deviation indicates the values are more spread out. In terms of valuing investments, standard deviation can provide a gauge of the historical volatility of an investment.

Tracking error
This measures how far a portfolio's actual performance differs from its benchmark index. The lower the number, the more closely it resembles the index.

Weighted average market cap
The average market capitalisation of a holding, weighted by the size of that position in a portfolio or index.
