-The Fund's investments are concentrated in companies addressing global challenges including population growth, ageing population, resource constraints, and climate change, with potential exposure to emerging markets and may be more volatile.
-Investors should not only base on this document alone to make investment decisions and should read the offering documents including the risk factors for further details.

Investment Objective and Strategy

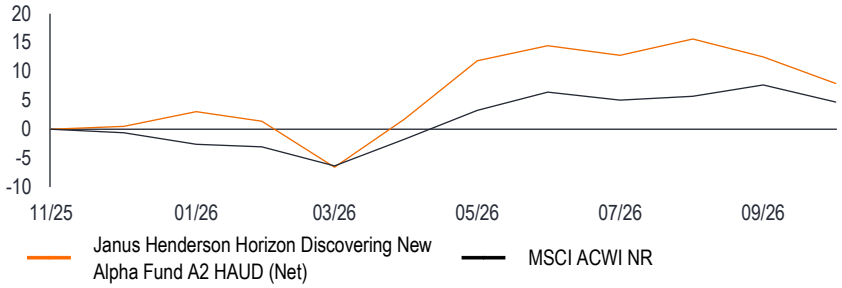

The Fund aims to provide capital growth over the long term. The Fund invests at least 80% of its net assets in equities or equity-related instruments of companies worldwide, including up to 20% of its net assets in emerging markets, whose products and services are considered by the Investment Manager to contribute positively to addressing global challenges including population growth, ageing population, resource constraints and climate change. The Fund may invest in companies of any size, in any country and in any industry, but may have a bias towards smaller capitalisation companies.

Additional fund information

Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. This is a Luxembourg SICAV Fund, regulated by the Commission de Surveillance du Secteur Financier (CSSF). Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations. To obtain our prospectus and any additional information please visit our website on: www.janushenderson.com. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund. Cash balances and exposures are based on settled and unsettled trades as at the reporting date.

Glossary

Active share
This measures how much a portfolio's holdings differ from its benchmark index. For example, a portfolio with an active share of 60% indicates that 60% of its holdings differ from its benchmark, while the remaining 40% mirror the benchmark.

Price-to-book (P/B) ratio
A financial ratio used to value a company's shares. It is calculated by dividing a company's market value (share price) by the book value of its equity (value of the company's assets on its balance sheet). A P/B value <1 can indicate a potentially undervalued company or a declining business. The higher the P/B ratio, the higher the premium the market is willing to pay for the company above the book (balance sheet) value of its assets.

Price-to-earnings (P/E) ratio
A popular ratio used to value a company's shares, compared to other stocks, or a benchmark index. It is calculated by dividing the current share price by its earnings per share.

Weighted average market cap
The average market capitalisation of a holding, weighted by the size of that position in a portfolio or index.
