Who we are

At Janus Henderson our mission is to help clients define and achieve superior financial outcomes through differentiated insights, disciplined investments, and world-class service. This means being ever mindful of the futures of the millions of lives that our thinking and our investments help shape. Our diverse client base and robust balance sheet allow us to offer financial strength and stability with which to help investors achieve their objectives.

The human connection matters in all that we do. Teams across Janus Henderson come together every day to deliver outcomes for our clients – and their clients – that make a difference. We are proud of this responsibility as we fulfil our purpose of 'Investing in a brighter future together'. The goals we set, the strategy we create, and the way that we work are all shaped with this ultimate objective in mind.

Why us

Choosing Janus Henderson means benefiting from:

Differentiated insights

- We are proud of our deep-rooted research culture, which has underpinned our 90-year track record of investing.
- Janus Henderson's investment teams meet thousands of companies each year. Insight from these meetings combined with proprietary analysis results in original views that shape our investment positioning.
- With 350+ investment professionals around the world, we benefit from a range of perspectives that we test and share as we seek to differentiate between the winners and losers on behalf of our clients.

Disciplined investments

- Our investment teams set clearly defined objectives and processes to deliver long-term risk-adjusted returns. We value the trust clients place in us and are disciplined in staying true to our investment style through all market conditions.
- We apply robust controls to ensure that risk taken is in accordance with client expectations and investment manager expectations. We have more than 150 experts in our risk and compliance teams.

World class service

- We offer global reach with our broad network of investment and client service specialists. This is combined with the responsiveness, tailored solutions, and personal touch of a local partner.
- Understanding the challenges our clients – and their clients – face globally, and working in partnership, means we can provide support as we blend our best ideas and capabilities to define appropriate tailored outcomes.
- We seek to contribute to clients' understanding and decision-making – we share knowledge through published insights, at events, and by actively participating in debate on the future of investing.

Authorised Corporate Director's (ACD) report for the six months ended 30 November 2025

We are pleased to present the Interim Report & Accounts for Janus Henderson Investment Funds Series I (the 'Company') for the six months ended 30 November 2025.

Authorised status

The Company is an open-ended investment company (OEIC) with variable capital incorporated in England and Wales under registered number IC000181 and authorised by the Financial Conduct Authority (FCA) with effect from 11 June 2002. It is a United Kingdom Undertakings for Collective Investment in Transferable Securities (UK UCITS) scheme structured as an umbrella company, comprising of seven active sub-funds ('funds'), complying with chapter 5 of the Collective Investment Schemes Sourcebook (COLL). The operation of the Company is governed by the OEIC Regulations, COLL, its Instrument of Incorporation and the Prospectus.

The Company has an unlimited duration. Shareholders are not liable for the debts of the Company.

Segregation of assets

Each fund is treated as a separate entity and is a segregated portfolio of assets and those assets can only be used to meet the liabilities of, or claims against that fund.

Statement of Authorised Corporate Director's (ACD) responsibilities

The FCA's COLL requires the ACD to prepare financial statements for each annual accounting year and interim accounting period, which give a true and fair view, in accordance with the Statement of Recommended Practice (SORP) for financial statements of authorised funds issued by the Investment Association (IA) (formerly the Investment Management Association (IMA)) on 14 May 2014 and amended in June 2017, UK Generally Accepted Accounting Practice (UK GAAP) (UK Accounting Standards, comprising the Financial Reporting Standard 102 (FRS 102) applicable in the UK and Republic of Ireland), of the financial affairs of the Company and their revenue/expenditure for the period. The ACD is responsible for the management of the Company in accordance with its Instrument of Incorporation, Prospectus and the OEIC Regulations. The ACD is also responsible for taking reasonable steps for the prevention and detection of fraud and other irregularities.

Other information

Janus Henderson UK & Irish Smaller Companies Fund merged into Janus Henderson UK Smaller Companies Fund, a sub-fund of Janus Henderson UK & Europe Funds, on 18 March 2021. Janus Henderson UK & Irish Smaller Companies Fund holds a delisted stock in the portfolio which has prevented the fund from terminating. It is the ACD's intention to terminate the fund once the stock has been removed from the portfolio and as such the financial statements of the fund have been prepared on a basis other than going concern.

Value assessment

The board of Janus Henderson Fund Management UK Limited (JHFMUKL) present the value assessment report for the period to 31 December 2024, made available on our website www.janushenderson.com.

Access by this link (https://www.janushenderson.com/en-gb/investor/notice/value-assessment-report).

The FCA, the UK's financial services regulator, requires all fund management groups to perform a detailed assessment of whether funds are providing value to investors, and publish an annual statement summarising the outcome of this process, known as the value assessment. Our report is published by JHFMUKL, the Board of the ACD (the body responsible for an investment fund) and summarises the period to 31 December 2024. The report is published annually on our website at the end of April.

The value assessment considers a minimum of seven criteria set by the FCA. While investment performance and quality of service are clearly important factors, costs and charges paid by investors are also key considerations. At Janus Henderson, ensuring value is delivered to investors has always been central to our process and therefore the value assessment is an extension to the existing ongoing monitoring processes that provide oversight of how the funds are managed.

The report contains an overview of the process that Janus Henderson undertook to perform this assessment along with the conclusions.

Janus Henderson UK & Irish Smaller Companies Fund was not included within the value assessment as this fund merged into Janus Henderson UK Smaller Companies Fund, a sub-fund of Janus Henderson UK & Europe Funds, on 18 March 2021.

Macro risks

The Investment Manager continues to monitor closely macro risks, including geopolitical risks, such as the ongoing impact of regional conflicts and tariffs, and market risks, such as the higher interest rate environment. The Company has established processes to be able to respond to changes on a timely basis, and has established and tested business continuity and crisis management processes in place, which cover a number of disruptive scenarios. The Investment Manager also has embedded market risk monitoring processes, including modelling potential stressed market scenarios, to help inform investment decisions.

Janus Henderson UK & Irish Smaller Companies Fund closed on 18 March 2021 and whilst the risks noted above still exist, the impact of these on the fund during the period was minimal.

Market review for the six months ended 30 November 2025

Global equities, as measured by the MSCI World Index, rose by 16.7% in sterling and 14.7% in US dollar terms during the reporting period, as trade tensions eased and the US Federal Reserve (Fed) restarted its interest rate-cutting campaign. The gains – which were supported by continued interest in artificial intelligence (AI), although worries about elevated valuations pressured the technology sector in November – helped stock indices across the globe, including the MSCI World Index, hit record highs. In June, a ceasefire that ended a brief conflict between Israel and Iran spurred a 'relief rally'.

In the UK, the FTSE All Share Index advanced by 11.8% in sterling terms as looser monetary policy, plans by European countries to boost defence spending and thawing global trade tensions helped the market hit an all-time high. The government announced new tax rises in the Autumn Budget, although the measures alleviated some concerns about the UK's fiscal position. The Bank of England (BoE) implemented just one interest rate cut, in August, lowering its benchmark rate by 25 basis points (bps) to 4.0%. It appeared reluctant to announce further easing because of stubborn inflation, although its comments turned increasingly dovish towards the end of 2025. Consumer price rises were unchanged at 3.6% year on year in October compared with June, having moved within a narrow range, although they remained firmly above the BoE's 2% target. Economic growth weakened to 0.1% over the third quarter from the second quarter's 0.3% expansion, largely due to a contraction in the production sector. The unemployment rate increased to a more than 4-year high of 5.0% in the third quarter from 4.7% in the three months to the end of May, while both consumer and business confidence remained in negative territory throughout the period. Sterling dropped against the US dollar, having fallen from a more than 3-year high in early July, given investor anxiety ahead of the Budget and with the BoE expected to loosen monetary policy in December.

In Europe, the FTSE World Europe (Ex UK) Index increased by 9.9% in sterling and 5.7% in euro terms, helped by easier borrowing conditions, relief over a trade deal with the US and the prospect of increased defence spending in the region. The rise in equities propelled the benchmark index to a record high. France faced renewed political turmoil as a fourth Prime Minister in a year was appointed and wrangling over the 2026 budget continued. The European Central Bank (ECB) lowered its key deposit rate to 2.0% after announcing one 25 bps cut and said it was near the end of its rate-cutting cycle. Although annual inflation picked up in the Eurozone, from 2.0% in June to 2.2% in November, it remained close to the ECB's 2% target. Eurozone Gross Domestic Product (GDP) growth was tepid, although it expanded by a better-than-anticipated 0.2% over the third quarter, up from the second quarter's 0.1% increase. The region's largest economy, Germany, only narrowly avoided a technical recession. The euro strengthened against both sterling and the US dollar, hitting a 4-year high against the US currency around mid-September, partly because of the divergence between monetary policy in the US and the Eurozone, although it subsequently lost some ground.

In the US, the S&P 500 Index strengthened by 18.6% in sterling and 16.6% in US dollar terms, as improved US/China trade relations, AI and the first Fed rate cut in nine months drove the market to an all-time high. The end of the US government's longest-ever shutdown also boosted sentiment towards mid-November, while uncertainty about US monetary policy and AI-related technology valuations caused volatility during the same month. The Fed had initially appeared cautious about easing borrowing conditions due to mixed data on the economy and inflation. However, in September, the central bank highlighted a softening jobs market as it reduced interest rates by 25 bps to 4.25% and followed that with another 25 bps rate reduction in October. Annual inflation picked up from 2.7% in June to 3.0% in September. Evidence of economic softness continued to emerge: non-farm payrolls data was, for the most part, weak. Nevertheless, the economy displayed resilience, expanding by an annualised 3.8% in the second quarter – the highest rate in almost 2 years – and following the first quarter's 0.6% contraction, which stemmed largely from weaker business activity due to tariff fears. The US dollar was little changed overall against a basket of major currencies during the period.

In Japan, the Tokyo Stock Exchange First Section Index (TOPIX) was up by 14.8% in sterling and 22.0% in yen terms, as it benefited from looser global monetary policy, a Japan/US trade agreement, economic optimism and investors' AI enthusiasm. The positive sentiment lifted the TOPIX to an all-time high, while anxiety about trade rivalries and a stronger yen caused jitters early in the period. In November, new Prime Minister Sanae Takaichi announced a huge stimulus package to boost economic growth. The Bank of Japan (BoJ) kept interest rates at a 17-year high of 0.5% as it maintained its cautious approach. Annual core inflation, which excludes fresh food prices, cooled from 3.3% in June to 3.0% in October, as it continued to exceed the BoJ's 2% target. Third-quarter GDP shrank by an annualised 1.8%, marking the first decline in six quarters. The result, which followed 2.3% growth in the second quarter, was partly attributed to a drop in exports due to higher US tariffs earlier in the period. The yen weakened against the US dollar as trade worries abated, which helped the US currency reclaim some of its status as a perceived safe-haven investment.

In Asia, the MSCI All Country Asia Pacific ex Japan Index rallied by 19.2% in sterling and 17.1% in US dollar terms, as investors cheered a thawing in US/China relations and risk sentiment improved. Chinese shares rose due to hopes of economic recovery, optimism about AI and significant inflows from foreign investors. The economy continued to grow solidly, although some economic concerns, particularly deflationary pressures, unsettled investors. Hong Kong also benefited from the improved global mood, as well as a slew of large, well-received initial public offerings. Taiwanese stocks surged – the benchmark Taiwan Stock Exchange Capitalization Weighted Stock Index (TAIEX) hit a record peak – due to easing trade tensions, increases in key technology stocks and stronger-than-expected economic growth. South Korean equities jumped amid optimism about corporate reforms and following a rebound in GDP that helped to lift the benchmark Korea Composite Stock Price Index (KOSPI) to an all-time high.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Market review (continued)

The MSCI Emerging Markets Index was up by 21.9% in sterling and 19.8% in US dollar terms amid optimism about improvements in global trade ties, the Fed's rate reductions and AI. Indian shares rose modestly but underperformed the broader index. However, strong gains towards the end of the period, underpinned by better-than-forecast corporate earnings and the prospect of a US/India trade deal, allowed the market to recover from losses that were caused by worries about tariffs and high stock valuations. Brazilian stocks advanced – the benchmark Bovespa Index hit its highest-ever level – helped by continued economic expansion, lower-than-anticipated inflation and news that the US had trimmed levies on some imports from Brazil late in the period. South African equities were very strong – the benchmark FTSE/Johannesburg Stock Exchange (JSE) Africa All Share Index also reached an all-time high – as it benefited from economic optimism, a rate cut and strong commodity pricing. Turkey's market performed positively, albeit underperforming the MSCI Emerging Markets Index, with slower inflation and interest rate cuts offsetting political uncertainty following a crackdown on opposition politicians.

In fixed income, the JPM Global Government Bond Index returned 3.1% in sterling and 1.3% in US dollar terms. Yields on core government bond markets – including the US, UK, Germany and Japan – were mixed. The yield on US benchmark 10-year Treasuries declined (prices increased, reflecting their inverse relationship), as signs of a softening economy increased expectations that the Fed will continue cutting interest rates. The 10-year yield on German bunds rose, with the ECB continuing to hold its monetary policy, while the yield on French 10-year government bonds increased as political and fiscal concerns weighed on sentiment. The Japanese 10-year Japanese Government Bonds yield also gained, given expectations that the BoJ will tighten monetary policy further and amid concerns about government borrowings after the new stimulus package was announced. Corporate credit markets outperformed government bonds as risk sentiment improved.

In commodity markets, oil prices fell as major producers said they would increase production to win back market share from rivals, prompting predictions of oversupply. In June, prices spiked during the Israel/Iran conflict before falling after the two sides agreed a ceasefire. The spot gold price surged to a record high, given anxiety about rising US consumer prices and US government debt. The copper price rallied to an all-time high, mainly because of worries that the US administration might impose tariffs on imports of the metal to protect its domestic industry. However, US copper prices slumped at the end of July as Washington excluded refined metals from the higher import levy. Production disruptions underpinned gains later on.

Aggregated notes to the financial statements for the six months ended 30 November 2025

Accounting policies

Basis of preparation

The interim financial statements have been prepared under the historical cost basis, as modified by the revaluation of investments, and in accordance with the SORP for financial statements of authorised funds issued by the IA (formerly the IMA) on 14 May 2014 and amended in June 2017, FRS 102, the FCA's COLL, the Company's Instrument of Incorporation and the Prospectus.

The financial statements for all funds with the exception of Janus Henderson UK & Irish Smaller Companies Fund have been prepared on a going concern basis.

The financial statements for Janus Henderson UK & Irish Smaller Companies Fund have been prepared on a basis other than going concern as the ACD has merged this fund with Janus Henderson UK Smaller Companies Fund, a sub-fund of Janus Henderson UK & Europe Funds, on 18 March 2021. The ACD intends to terminate this fund at a future date once the delisted stock has been removed from the portfolio and Custodian records. There has been no impact to the financial statements or disclosure notes to adjust assets or liabilities to realisable value. No adjustments were necessary to provide for the costs of terminating the fund as the ACD will bear any related costs.

The accounting policies, distribution policy and potential risks are consistent with those of the financial statements for the year ended 31 May 2025 and are described in those annual accounts.

Cross holdings

As at 30 November 2025 there were no sub-fund cross holdings within Janus Henderson Investment Funds Series I (31/05/2025: none).

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Janus Henderson China Opportunities Fund

Authorised Corporate Director's report

Investment Fund Manager
Victoria Mio

Investment objective and policy
The fund aims to provide a return, from a combination of capital growth and income over the long term.

Performance target: To outperform the MSCI Zhong Hua 10/40 Index by 2.5% per annum, before the deduction of charges, over any 5 year period.

The fund invests at least 80% of its assets in a concentrated portfolio of shares (also known as equities) of companies, of any size, in any industry, in China or Hong Kong. Companies will have their registered office in or do most of their business (directly or through subsidiaries) in this region. The fund may invest up to 50% of its assets in China A-Shares. The portfolio may be concentrated in terms of its number of holdings and/or the size of its largest holdings.

The fund may also invest in other assets including companies outside this region, depositary receipts, Collective Investment Schemes (CIS) (including those managed by Janus Henderson), cash and money market instruments. The Investment Manager may use derivatives (complex financial instruments) to reduce risk or to manage the fund more efficiently.

The fund is actively managed with reference to the MSCI Zhong Hua 10/40 Index, which is broadly representative of the companies in which it may invest, as this forms the basis of the fund's performance target. The Investment Manager has discretion to choose investments for the fund with weightings different to the index or not in the index.

Strategy
The Investment Manager seeks to identify companies that can generate unexpected earnings growth, at both an industry and stock level, not yet recognised by the broader market. Central to this is the belief that Chinese equity markets are noisy and inefficient, thereby allowing regular, meaningful and profitable investment opportunities to appear.

Performance summary

Cumulative performance

Performance summary (continued)
Source: Morningstar
Class I accumulation (Net), NAV to NAV, net of fees and net income reinvested as at 12 noon valuation point.
Class I accumulation (Gross), NAV to NAV, gross of OCF and net income reinvested as at 12 noon valuation point.

Benchmark values are as at close of business.

Class I accumulation is disclosed as it is the representative share class.

Benchmark usage:
Index: MSCI Zhong Hua 10/40 Index
Index usage: Target
Index description: The MSCI Zhong Hua 10/40 Index is a measure of the combined performance of large and medium sized companies listed on Hong Kong and Chinese stock markets re-weighted from the parent index by the benchmark provider to align with the UCITS fund investment restrictions. It forms the basis for the fund's performance target.

Peer group: IA China/Greater China Sector
Peer group usage: Comparator
Peer group description: The IA groups funds with similar geographic and/or investment remit into sectors. The fund's ranking within the sector (as calculated by a number of data providers) provides a useful performance comparison against other funds with similar aims.

Past performance does not predict future returns. The value of an investment and the revenue from it can fall as well as rise as a result of market and currency fluctuations and you may not get back the amount originally invested.

Investment review

The fund returned 21.9% (Net), 22.4% (Gross) based on Class I accumulation over the period under review, compared with a return of 19.4% in the MSCI Zhong Hua 10/40 Index, a return of 20.8% in the Target Index + 2.5% and a return of 22.5% in the IA China/Greater China Sector peer group benchmark.

Chinese equities rose sharply during the reporting period, despite losing some ground later on. The market's positive momentum was due to hopes of an economic recovery, optimism about sectors expected to benefit from AI and significant inflows from foreign investors. An improvement in global trade relations, as the US and China agreed to a framework deal that included a year-long trade truce, further boosted investor sentiment. Hong Kong's market also benefited from the improved global mood, as well as a slew of large, well-received initial public offerings.

China's headline GDP growth remained steady at around 5%, although some economic concerns, particularly deflationary pressures and a slowdown in industrial output growth, unsettled investors. In late August, policy makers unveiled China's 'AI Plus' initiative, which aims to adopt AI across six key areas, redoubling efforts to support the nascent AI industry. Excitement around AI spread to Chinese technology stocks, with companies signalling greater investment ambitions.

All sectors rose during the period. The materials sector was the strongest, followed by healthcare. Mining stocks were boosted by substantial price increases in some commodities, notably precious and industrial metals, as well as Beijing's decision to ease some export controls on critical minerals. Pharmaceutical stocks rallied due to a significant increase in licensing agreements for Chinese experimental drugs with global drugmakers. Conversely, sectors perceived to be more defensive, such as consumer staples and utilities, lagged as markets rallied.

The top positive contributors to the fund's performance were Zijin Mining and Contemporary Amperex Technology. Zijin Mining, a global copper and gold producer, performed well as the price of gold rallied to an all-time high. Shares in battery maker Contemporary Amperex Technology rose after a research and brokerage firm upwardly revised its price target, along with revenue and earnings forecasts. The industry is expected to benefit from robust demand for the company's energy storage system from multiple sources, notably renewable energy and electric vehicles.

The holdings in Giant Biogene and China Pacific Insurance detracted. Shares in collagen skincare developer Giant Biogene fell as negative publicity about the level of recombinant collagen in its products resulted in significant reputational risk for the company. We have since exited the position. China Pacific Insurance shares lagged with the insurance sector amid concerns that insurers faced declining reinvestment returns in a low interest rate environment.

During the period, the fund initiated several positions, including Jiangsu Hengli Hydraulic. Jiangsu Hengli Hydraulic is a leading supplier of hydraulic components for mobile machinery, including hydraulic cylinders, pumps, and valves for diggers and other heavy equipment. We felt that Jiangsu Hengli Hydraulic has successfully integrated into the global supply chain through a well-executed diversification and globalisation strategy. This has been supported by its consistent investment in research and development, strong value-for-money proposition and superior services, we believed. We thought it was well positioned given the prospect of a cyclical recovery in the domestic construction machinery industry, among other things.

Sales during the period included JD.com and Giant Biogene. E-commerce retailer JD.com reported disappointing second-quarter results. Since entering the food delivery business in February, the company has been embroiled in a price war with other major e-commerce platforms, including Alibaba and Meituan. We had doubts about this diversification strategy due to the intense competition in the sector.

We believe that both onshore and offshore Chinese equities are well positioned to benefit from further policy support in the areas of AI, consumption and infrastructure. A weaker US dollar and improved US/China relations are major catalysts to attract foreign funds seeking higher returns in emerging markets such as China. While risks remain, the alignment of looser monetary policy, a US/China detente and favourable currency dynamics create a supportive environment for equities, in our view.

We are positioning the fund in sectors such as technology, electric vehicle batteries, healthcare and biotechnology, and financials. At the same time, we avoid sectors that are tied to global trade and domestic deflationary pressures.

We remain positive about the long-term investment opportunities in Chinese equities due to what we see as the market's attractive valuation, value-up reforms, unique sector exposure and diversification benefits. Given the current two-speed model of growth (manufacturing/exports on the fast track, while consumption and property drift along), there are a number of opportunities that can generate positive performance, in our view. Therefore, we continue to focus on companies with improving corporate fundamentals, what we see as better potential for shareholder returns and that are trading at reasonable valuations.

References made to individual securities do not constitute a recommendation to buy, sell or hold any security, investment strategy or market sector, and should not be assumed to be profitable. Janus Henderson Investors, its affiliated advisor, or its employees, may have a position in the securities mentioned.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Comparative tables (continued)

Direct transaction costs incurred on securities transactions (including derivatives) are stated after deducting the proportion of the amounts collected from dilution adjustments that relate to direct transaction costs.

Performance values are at close of business on a bid basis, which will differ from those in the Performance summary.

Operating charges
Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures
There were no share classes launched or closed during the period.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Ongoing charge figure

The annualised ongoing charge figure (OCF) of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	30/11/25 %	31/05/25 %
Class A accumulation	1.71	1.71
Class E accumulation	1.21	1.21
Class I accumulation	0.88	0.88
Class I USD accumulation	1.10	1.10

The OCF is an ex-post figure for the financial period which is calculated in accordance with the Committee of European Securities Regulators (CESR) /10-674.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Risk and reward profile

The fund currently has 4 types of share class in issue: A accumulation, E accumulation, I accumulation and I USD accumulation.

The risk and reward profile for A accumulation, E accumulation and I accumulation is as follows:

Potentially lower reward **Potentially higher reward**

Lower risk **Higher risk**

1	2	3	4	5	6	7

The risk and reward profile for I USD accumulation is as follows:

Potentially lower reward **Potentially higher reward**

Lower risk **Higher risk**

1	2	3	4	5	6	7

The share classes appear at 6 out of 7, with the exception of Class I USD accumulation which appears at 7 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in Net Asset Value in the past five years than those in lower categories. The lowest category does not mean risk free.

The Synthetic Risk and Reward Indicator (SRRI) is calculated based on historical volatility over a rolling five year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions.

The value of an investment and any income from it can go up or down. When you sell your shares they may be worth less than you paid for them.

The rating above is based on the historic volatility of the share classes. Historic data may not be a reliable indication of the future risk profile of the fund. The rating is not guaranteed and may change over time.

Other material risks not captured by the rating:

China A-Shares The fund may invest in China A-Shares via a Stock Connect programme. This may introduce additional risks including operational, regulatory, liquidity and settlement risks.

Counterparty Risk and Operational Risk The fund could lose money if a counterparty with which the fund trades becomes unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider.

Country or Region If a fund has a high exposure to a particular country or geographical region it carries a higher level of risk than a fund which is more broadly diversified.

Concentration This fund may have a particularly concentrated portfolio relative to its investment universe or other funds in its sector. An adverse event impacting even a small number of holdings could create significant volatility or losses for the fund.

Derivatives The fund may use derivatives with the aim of reducing risk or managing the portfolio more efficiently. However this introduces other risks, in particular, that a derivative counterparty may not meet its contractual obligations.

Emerging Markets Emerging markets expose the fund to higher volatility and greater risk of loss than developed markets; they are susceptible to adverse political and economic events, and may be less well regulated with less robust custody and settlement procedures.

Equities Shares/Units can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.

Exchange Rates If the fund holds assets in currencies other than the base currency of the fund, or you invest in a share/unit class of a different currency to the fund (unless hedged, i.e. mitigated by taking an offsetting position in a related security), the value of your investment may be impacted by changes in exchange rates.

Investment Style - Growth The fund follows a growth investment style that creates a bias towards certain types of companies. This may result in the fund significantly underperforming or outperforming the wider market.

Liquidity Securities within the fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Risk and reward profile (continued)

The full list of the fund's risks are contained in the 'Risk Factors' section of the fund's Prospectus.

There has been no change to the risk rating during the period.

The SRRI conforms to the European Securities and Markets Authority (ESMA) guidelines for the calculation of the SRRI.

Janus Henderson Emerging Markets Opportunities Fund

Authorised Corporate Director's report

Investment Fund Managers
Matthew Culley and Douglas Turnbull

Please note that with effect from 29 July 2025, Daniel J. Graña no longer manages this fund. Douglas Turnbull now co-manages the fund.

Investment objective and policy
The fund aims to provide a return, from a combination of capital growth and income over the long term.

Performance target: To outperform the MSCI Emerging Markets Index by 2% per annum, before the deduction of charges, over any 5 year period.

The fund invests at least 80% of its assets in a concentrated portfolio of shares (also known as equities) of companies, of any size, in any industry, in emerging markets. Companies will have their registered office in or do most of their business (directly or through subsidiaries) in emerging markets. 'Emerging markets' are countries in the MSCI Emerging Markets Index, included in the World Bank definition of developing economies, or which are, in the Investment Manager's opinion, developing. The portfolio may be concentrated in terms of its number of holdings and/or the size of its largest holdings.

The fund may also invest in other assets including companies outside emerging markets, depositary receipts, CIS (including those managed by Janus Henderson), cash and money market instruments. The Investment Manager may use derivatives (complex financial instruments), including total return swaps, to reduce risk or to manage the fund more efficiently.

The fund is actively managed with reference to the MSCI Emerging Markets Index, which is broadly representative of the companies in which it may invest, as this forms the basis of the fund's performance target. The Investment Manager has discretion to choose investments for the fund with weightings different to the index or not in the index.

Strategy
The Investment Manager seeks consistent risk-adjusted returns (an expression of an investment's return through how much risk is involved in producing that return) by looking to identify the most attractive opportunities within countries across various stages of economic and political development. This diverse landscape requires the Investment Manager to utilise an array of perspectives to fully evaluate these opportunities. By combining fundamental company research, market and economic analysis, a keen focus on corporate governance and quantitative input, the portfolio attempts to capture price inefficiencies (benefit from differences between the price that the fund can buy or sell company shares, compared to the Investment Manager's opinion of their true value), across the market-cap spectrum. Where the fund invests in sectors dominated by state-owned entities, companies within the sectors may be excluded if they are assessed by the Investment Manager as having poor corporate governance.

Performance summary

Cumulative performance

	Six months 31 May 25 - 30 Nov 25 %	One year 30 Nov 24 - 30 Nov 25 %	Three years 30 Nov 22 - 30 Nov 25 %	Five years 30 Nov 20 - 30 Nov 25 %	Since inception 27 Feb 87 - 30 Nov 25 %

Performance summary (continued)

Please note that the performance target is to be achieved over a specific annualised time period. Refer to the investment objective and policy above.

* Benchmark return is not quoted as the fund inception date is earlier than the benchmark inception date.
** Historical performance has been restated.

On 2 August 2022 Janus Henderson Emerging Markets Opportunities Fund received a windfall tax refund as a result of a successful settlement of historic Franked Investment Income Group Litigation Order (FII GLO) tax claims filed with HM Revenue & Customs (HMRC) that increased the NAV by 0.55%. This uplift is reflected in all performance figures for the representative share class that span that date.

Source: Morningstar
Class I accumulation (Net), NAV to NAV, net of fees and net income reinvested as at 12 noon valuation point.
Class I accumulation (Gross), NAV to NAV, gross of OCF and net income reinvested as at 12 noon valuation point.

Benchmark values are as at close of business.

Class I accumulation is disclosed as it is the representative share class.

Benchmark usage:
Index: MSCI Emerging Markets Index
Index usage: Target
Index description: The MSCI Emerging Markets Index is a measure of the combined performance of large and medium sized companies from emerging stock markets. It forms the basis of the fund's performance target.

Peer group: IA Global Emerging Markets Sector
Peer group usage: Comparator
Peer group description: The IA groups funds with similar geographic and/or investment remit into sectors. The fund's ranking within the sector (as calculated by a number of data providers) provides a useful performance comparison against other funds with similar aims.

Past performance does not predict future returns. The value of an investment and the revenue from it can fall as well as rise as a result of market and currency fluctuations and you may not get back the amount originally invested.

Investment review

The fund returned 19.5% (Net), 20.1% (Gross) based on Class I accumulation over the period under review, compared with a return of 21.9% in the MSCI Emerging Markets Index, a return of 23.1% in the Target Index + 2% and a return of 19.7% in the IA Global Emerging Markets Sector peer group benchmark.

The MSCI Emerging Markets Index delivered positive returns over the reporting period, supported by relatively stable global economic growth and hopes of looser monetary policy. Fears of a global trade war also eased, despite continued uncertainty about US tariffs. Excitement about AI boosted information technology (IT) shares, especially in South Korea and Taiwan. Stocks rose in China due to optimism about fiscal and monetary stimulus, while Indonesian equities were notable detractors.

The fund's holdings in Argentina hampered relative performance, while stock selection in Taiwan contributed. Among individual holdings, HDFC Bank, a leading lender in India, was a relative detractor. The stock faced headwinds due to concerns that near-term economic headwinds in India could slow lending growth. We continued to appreciate HDFC Bank given its market leadership and best-in-class asset quality. The company has also benefited from a strong balance sheet and robust deposit base, which has provided a cost-effective source of funds. We remained constructive on the long-term outlook for India, and we believed the bank was well positioned as economic activity expands.

Relative performance was hindered by a position in Talabat (owned and operated by Delivery Hero MENA). Talabat is the leading online meal ordering and delivery platform in the Middle East. Despite the company's strong financial performance, it faced competitive pressures as new entrants, such as Chinese food delivery company Meituan, entered markets where Talabat operates. Investors feared that this could lead to increased promotional activity and lower margins. In our view, these concerns were overstated, and we continued to believe in the company's competitive advantages.

Contemporary Amperex Technology was a top positive contributor to relative performance. The Chinese company controls more than 30% of the electric vehicle battery market, serving major manufacturers such as Tesla and Volkswagen. Additionally, it has emerged as a leader in energy storage solutions (ESS) that improve the efficiency and reliability of renewable energy for the power grid. Contemporary Amperex Technology has signed several large ESS deals, including in China, where the authorities have targeted a significant increase in energy storage capacity by 2027. Contemporary Amperex Technology has continued to generate significant free cash flow, which it has reinvested in technology and returned to shareholders through stock buybacks.

Taiwan-based Chroma ATE was another relative contributor. Chroma ATE provides electronic test and measuring equipment that helps leading semiconductor manufacturers ensure product quality. Demand for this testing equipment has expanded with the increased complexity of microchip manufacturing. This has supported strong financial performance, fuelled by growth in end markets such as AI, cloud computing and electric vehicles.

We remain upbeat on the prospects for emerging markets, where we have found compelling investment opportunities with above-average earnings potential trading at attractive valuations. We also pay close attention to country fundamentals and the quality of corporate governance.

We have been encouraged by recent developments in China, including targeted government policies that have helped to stabilise the economy. We have identified a number of strong businesses in China trading at very attractive valuations. We have been cautious about valuations in India, even though we have started to find pockets of value and some idiosyncratic stocks that appeal to our bottom-up stock process. India's domestic demand downcycle also appears to be bottoming out, and the long-term outlook for its economy remains bright, aided by an expanding middle class.

Innovations around AI and advanced computing have been a strong tailwind for emerging market companies, especially in South Korea and Taiwan. While we have continued to see indications of continued strong capital spending around AI, we have been disciplined about trimming positions where we believe valuations are not fully supported by fundamentals. We have also welcomed a greater emphasis on corporate governance in markets such as South Korea, where support has grown for the 'Value Up' programme, which aims to increase shareholder value.

References made to individual securities do not constitute a recommendation to buy, sell or hold any security, investment strategy or market sector, and should not be assumed to be profitable. Janus Henderson Investors, its affiliated advisor, or its employees, may have a position in the securities mentioned.

Operating charges (annualised)	0.74%
Direct transaction costs	0.27%
Prices	
Highest share price (USD cents)	128.90[2]
Lowest share price (USD cents)	101.50[2]

[1] Class I USD accumulation closed on 18 May 2023.
[2] To 18 May 2023.

Direct transaction costs incurred on securities transactions (including derivatives) are stated after deducting the proportion of the amounts collected from dilution adjustments that relate to direct transaction costs.

Performance values are at close of business on a bid basis, which will differ from those in the Performance summary.

Operating charges
Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures
There were no share classes launched or closed during the period.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Ongoing charge figure

The annualised OCF of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	30/11/25 %	31/05/25 %
Class A accumulation	1.81	1.82
Class C accumulation	0.65	0.67[1]
Class E accumulation	1.31	1.32
Class I accumulation	0.93	0.94
Class I income	0.93	0.94
Class Z accumulation	0.11	0.12

[1] The OCF is a blended rate reflecting the new General Administration Charge rates which took effect from 11 February 2025.

The OCF is an ex-post figure for the financial period which is calculated in accordance with the CESR /10-674.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Risk and reward profile

The fund currently has 6 types of share class in issue: A accumulation, C accumulation, E accumulation, I accumulation, I income and Z accumulation.

Each share class has the same risk and reward profile which is as follows:

The share classes appear at 5 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in Net Asset Value in the past five years than those in lower categories. The lowest category does not mean risk free.

The SRRI is calculated based on historical volatility over a rolling five year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions.

The value of an investment and any income from it can go up or down. When you sell your shares they may be worth less than you paid for them.

The rating above is based on the historic volatility of the share classes. Historic data may not be a reliable indication of the future risk profile of the fund. The rating is not guaranteed and may change over time.

Other material risks not captured by the rating:

Concentration This fund may have a particularly concentrated portfolio relative to its investment universe or other funds in its sector. An adverse event impacting even a small number of holdings could create significant volatility or losses for the fund.

Counterparty Risk and Operational Risk The fund could lose money if a counterparty with which the fund trades becomes unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider.

Derivatives The fund may use derivatives with the aim of reducing risk or managing the portfolio more efficiently. However this introduces other risks, in particular, that a derivative counterparty may not meet its contractual obligations.

Emerging Markets Emerging markets expose the fund to higher volatility and greater risk of loss than developed markets; they are susceptible to adverse political and economic events, and may be less well regulated with less robust custody and settlement procedures.

Equities Shares/Units can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.

Exchange Rates If the fund holds assets in currencies other than the base currency of the fund, or you invest in a share/unit class of a different currency to the fund (unless hedged, i.e. mitigated by taking an offsetting position in a related security), the value of your investment may be impacted by changes in exchange rates.

Liquidity Securities within the fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses.

Smaller Companies Shares of small and mid-size companies can be more volatile than shares of larger companies, and at times it may be difficult to value or to sell shares at desired times and prices, increasing the risk of losses.

The full list of the fund's risks are contained in the 'Risk Factors' section of the fund's Prospectus.

The risk rating for all share classes decreased from 6 to 5 during the period. The ratings may change over time as a fund takes on more or less risky investments or where market conditions become more or less volatile. At share class level the ratings may differ dependent on the class currency and may be influenced by currency movements and the impact of inflows and outflows.

The SRRI conforms to the ESMA guidelines for the calculation of the SRRI.

Janus Henderson European Focus Fund

Authorised Corporate Director's report

Investment Fund Managers
Robert Schramm-Fuchs and Marc Schartz

Investment objective and policy
The fund aims to provide a return, from a combination of capital growth and income over the long term (5 years or more).

The fund invests at least 80% of its assets in a concentrated portfolio of shares (also known as equities) of companies, of any size, in any industry, in Europe (excluding UK). Companies will be incorporated, headquartered, listed on an exchange in, or deriving significant revenue from, this region. The portfolio may be concentrated in terms of its number of holdings and/or the size of its largest holdings.

The fund may also invest in other assets including CIS (including those managed by Janus Henderson), cash and money market instruments. The Investment Manager may use derivatives (complex financial instruments) to reduce risk or to manage the fund more efficiently.

The fund is actively managed with reference to the FTSE World Europe (Ex UK) Index, which is broadly representative of the companies in which it may invest, as this can provide a useful comparator for assessing the fund's performance. The Investment Manager has discretion to choose investments for the fund with weightings different to the index or not in the index.

Strategy
The Investment Manager seeks to capture performance by anticipating the catalysts for change in European companies and industries. The investment process blends compelling company-specific stories with sector themes, with a goal of providing access to sustainable long-term growth trends. This results in a portfolio of typically 30 to 50 mainly well-known larger companies and under-researched mid-sized companies. Smaller companies are not normally a significant focus of the portfolio.

Performance summary

Cumulative performance	**Six months 31 May 25 - 30 Nov 25 %**	**One year 30 Nov 24 - 30 Nov 25 %**	**Three years 30 Nov 22 - 30 Nov 25 %**	**Five years 30 Nov 20 - 30 Nov 25 %**	**Since inception 31 Jan 01- 30 Nov 25 %**

Investment review

The fund returned 10.8% based on Class I accumulation (Net) over the period under review, compared with a return of 9.9% in the FTSE World Europe (Ex UK) Index and a return of 6.8% in the IA Europe excluding UK Sector peer group benchmark.

European equities advanced over the reporting period, helped by easier borrowing conditions and relief over a trade deal with the US. The prospect of increased fiscal spending and pro-growth reforms in the region also helped overcome headwinds from political volatility in France.

France faced renewed political turmoil as a fourth Prime Minister in a year was appointed and wrangling over the 2026 budget continued. The ECB lowered its key deposit rate to 2.0% in June, although it then left rates on hold for the rest of the period. Eurozone annual inflation remained close to the ECB's 2% target, despite a modest uptick in the final months. Eurozone GDP growth was tepid, although it expanded by a better-than-anticipated 0.2% over the third quarter, up from the second quarter's 0.1% increase.

Notable positive contributors included the fund's holdings in the financial sector, including Erste Bank, BBVA, UniCredit and Deutsche Bank. These lenders posted strong results, which reflected the more favourable operating environment for European banks. Biotechnology company argenx aided relative performance after it posted encouraging trial data for its immunology drug Vyvgart. The holding in Chilean multinational mining company Antofagasta also added value. The share price rallied after the firm posted solid results and gave reassuring messages on different development projects.

Affordable jewellery maker Pandora detracted. The share price fell after the Danish firm released disappointing results, which reflected weaker sales in key European markets in the second quarter of 2025. Although the firm maintained its full-year guidance, investors remained concerned about the sustainability of the firm's growth trajectory. Rheinmetall was another detractor. After outperforming early this year, Rheinmetall experienced some consolidation in the latter months alongside other European defence stocks. Semiconductor capital equipment company ASM International also underperformed. The Dutch firm succumbed to bouts of weakness in the technology sector, caused by concerns about some firms' large AI capital spending programmes alongside high valuations in the sector.

During the period, the fund purchased ABN AMRO Bank given the favourable outlook for the European financial sector. Spanish multinational electric utility Iberdrola was another addition. We liked the company for its substantial exposure to electricity grid, which are expected to expand. We also added French train manufacturer Alstom. We felt that changes in the management team, along with some positive commentary on the quality of its backlog, had paved the way for a more sustained turnaround in the business. Elsewhere, we added Swiss healthcare company Roche, following some positive developments in the firm's new product pipeline, and Spanish technology and defence company Indra Sistemas, which has been undergoing a period of significant change as it pivots to increase its exposure to defence. The company expressed its hope that it would achieve a €10bn order backlog in its defence segment during 2026.

The fund sold the position in Pandora. It exited RELX, SAP and Publicis amid uncertainty about the impact that AI would have on these companies.

We remain positive about the outlook for European equities. The asset class has delivered strong gains so far in 2025 and the question is whether this performance can be sustained into 2026.

Meaningful change and true structural reforms are crucial for strengthening Europe's competitiveness. Developments in Germany are particularly encouraging: we see a clear intent to raise the structural growth potential of the economy with measures to address existing headwinds (bureaucracy, technology investment and financial regulation) along with significant investment to upgrade infrastructure and defence. We recognise that challenges remain at the European Union (EU) level, particularly in achieving consensus on regulatory reforms and financial integration. While changes to EU regulation often do not move as fast or as deep as we would like, momentum has recently reaccelerated and we remain confident that progress is being made.

At the time of writing, European equities continue to trade close to record discounts compared with US stocks, while international investors remain underexposed. We think these factors should provide a margin of safety during periods of macroeconomic volatility. While the fundamental case for banking and defence stocks – the main drivers of European equity performance in 2025 – remain intact, we believe the market will broaden in 2026. Firstly, the start of a monetary easing cycle in the US bodes well for European companies with cyclical US exposure. Moreover, fiscal stimulus – most notably Germany's €500bn infrastructure package – should start making a real impact in 2026. Additionally, trade tensions are most likely beyond their peak.

We maintain a balanced portfolio with a mixture of both cyclical and defensive stocks.

References made to individual securities do not constitute a recommendation to buy, sell or hold any security, investment strategy or market sector, and should not be assumed to be profitable. Janus Henderson Investors, its affiliated advisor, or its employees, may have a position in the securities mentioned.

Direct transaction costs incurred on securities transactions (including derivatives) are stated after deducting the proportion of the amounts collected from dilution adjustments that relate to direct transaction costs.

Performance values are at close of business on a bid basis, which will differ from those in the Performance summary.

Operating charges
Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures
The following share class launched during the period.

Share class	Launch date
Class G accumulation	20 November 2025

There were no share classes closed during the period.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Ongoing charge figure

The annualised OCF of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	30/11/25 %	31/05/25 %
Class A accumulation	1.69	1.69
Class E accumulation	1.19	1.19
Class G accumulation[1]	0.59	n/a
Class I accumulation	0.89	0.89

[1] Class G accumulation launched on 20 November 2025 therefore there is no prior year comparative.

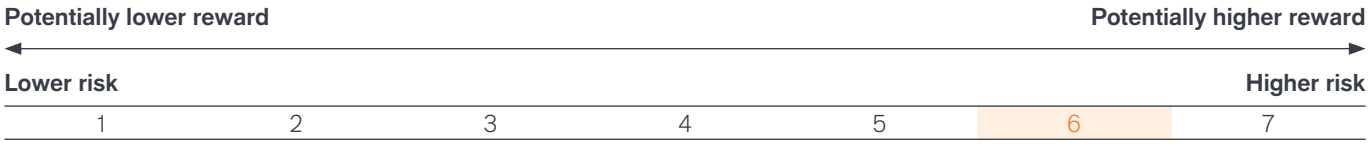

The OCF is an ex-post figure for the financial period which is calculated in accordance with the CESR /10-674.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Risk and reward profile

The fund currently has 4 types of share class in issue: A accumulation, E accumulation, G accumulation and I accumulation.

Each share class has the same risk and reward profile which is as follows:

The share classes appear at 6 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in Net Asset Value in the past five years than those in lower categories. The lowest category does not mean risk free.

The SRRI is calculated based on historical volatility over a rolling five* year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions.

The value of an investment and any income from it can go up or down. When you sell your shares they may be worth less than you paid for them.

The rating above is based on the historic volatility of the share classes. Historic data may not be a reliable indication of the future risk profile of the fund. The rating is not guaranteed and may change over time.

Other material risks not captured by the rating:

Concentration This fund may have a particularly concentrated portfolio relative to its investment universe or other funds in its sector. An adverse event impacting even a small number of holdings could create significant volatility or losses for the fund.

Counterparty Risk and Operational Risk The fund could lose money if a counterparty with which the fund trades becomes unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider.

Country or Region If a fund has a high exposure to a particular country or geographical region it carries a higher level of risk than a fund which is more broadly diversified.

Derivatives The fund may use derivatives with the aim of reducing risk or managing the portfolio more efficiently. However this introduces other risks, in particular, that a derivative counterparty may not meet its contractual obligations.

Equities Shares/Units can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.

Exchange Rates If the fund holds assets in currencies other than the base currency of the fund, or you invest in a share/unit class of a different currency to the fund (unless hedged, i.e. mitigated by taking an offsetting position in a related security), the value of your investment may be impacted by changes in exchange rates.

Liquidity Securities within the fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses.

Smaller Companies Shares of small and mid-size companies can be more volatile than shares of larger companies, and at times it may be difficult to value or to sell shares at desired times and prices, increasing the risk of losses.

The full list of the fund's risks are contained in the 'Risk Factors' section of the fund's Prospectus.

There has been no change to the risk rating during the period.

The SRRI conforms to the ESMA guidelines for the calculation of the SRRI.

* Class G accumulation launched on 20 November 2025 and as it does not have a five year history, a synthetic history has been created using the fund's relevant sector average.

Janus Henderson European Selected Opportunities Fund

Authorised Corporate Director's report

Investment Fund Managers
Robert Schramm-Fuchs and Marc Schartz

Please note that with effect from 1 September 2025 Tom Lemaigre no longer co-manages this fund.

Investment objective and policy
The fund aims to provide a return, from a combination of capital growth and income over the long term (5 years or more).

The fund invests at least 80% of its assets in shares (also known as equities) of companies, of any size, in any industry, in Europe (excluding UK). Companies will be incorporated, headquartered, listed on an exchange in, or deriving significant revenue from, this region.

The fund may also invest in other assets including CIS (including those managed by Janus Henderson), cash and money market instruments. The Investment Manager may use derivatives (complex financial instruments) to reduce risk or to manage the fund more efficiently.

The fund is actively managed with reference to the FTSE World Europe (Ex UK) Index, which is broadly representative of the companies in which it may invest, as this can provide a useful comparator for assessing the fund's performance. The Investment Manager has discretion to choose investments for the fund with weightings different to the index or not in the index.

Strategy
The Investment Manager looks to anticipate catalysts for change in companies and industries based on fundamental research and thought leadership, in order to construct a portfolio of large companies complemented by mid-size company opportunities with the potential to enhance the fund's overall returns. Smaller companies are not normally a significant focus of the portfolio.

Performance summary

Cumulative performance

	Six months 31 May 25 - 30 Nov 25 %	One year 30 Nov 24 - 30 Nov 25 %	Three years 30 Nov 22 - 30 Nov 25 %	Five years 30 Nov 20 - 30 Nov 25 %	Since inception 31 Aug 84 - 30 Nov 25 %
Class I accumulation (Net)	8.0	22.1	46.3	61.1	15,089.2
FTSE World Europe (Ex UK) Index	9.9	23.8	47.7	66.0	-*
IA Europe excluding UK Sector	6.8	19.7	39.3	50.8	6,024.5

Performance/performance target related data will display only when relevant to the fund/share class inception date and the annualised target time period.

Discrete performance

	30 Nov 24 - 30 Nov 25 %	30 Nov 23 - 30 Nov 24 %	30 Nov 22 - 30 Nov 23 %	30 Nov 21 - 30 Nov 22 %	30 Nov 20 - 30 Nov 21 %

Performance summary (continued)

Benchmark usage:
Index: FTSE World Europe (Ex UK) Index
Index usage: Comparator
Index description: The FTSE World Europe (Ex UK) Index is a measure of the combined performance of large and medium sized companies from developed and advanced emerging European stock markets excluding the UK. It provides a useful comparison against which the fund's performance can be assessed over time.

Peer group: IA Europe excluding UK Sector
Peer group usage: Comparator
Peer group description: The IA groups funds with similar geographic and/or investment remit into sectors. The fund's ranking within the sector (as calculated by a number of data providers) provides a useful performance comparison against other funds with similar aims.

Past performance does not predict future returns. The value of an investment and the revenue from it can fall as well as rise as a result of market and currency fluctuations and you may not get back the amount originally invested.

Significant portfolio changes for the six months ended 30 November 2025

Investment review

The fund returned 8.0% based on Class I accumulation (Net) over the period under review, compared with a return of 9.9% in the FTSE World Europe (Ex UK) Index and a return of 6.8% in the IA Europe excluding UK Sector peer group benchmark.

European equities advanced over the reporting period, helped by easier borrowing conditions and relief over a trade deal with the US. The prospect of increased fiscal spending and pro-growth reforms in the region also helped overcome headwinds from political volatility in France.

France faced renewed political turmoil as a fourth Prime Minister in a year was appointed and wrangling over the 2026 budget continued. The ECB lowered its key deposit rate to 2.0% in June, although it then left rates on hold for the rest of the period. Eurozone annual inflation remained close to the ECB's 2% target, despite a modest uptick in the final months. Eurozone GDP growth was tepid, although it expanded by a better-than-anticipated 0.2% over the third quarter, up from the second quarter's 0.1% increase.

Rheinmetall was the biggest detractor. After outperforming early in the year, Rheinmetall experienced some consolidation in the latter months alongside other European defence stocks.

ASML and Nebius also underperformed. The Dutch firms succumbed to bouts of weakness in the technology sector, caused by concerns about some firms' large AI capital spending programmes alongside high valuations in the sector. Nemetschek and RELX also weighed on performance, as their shares fell with other software and data management stocks amid concerns about possible AI disruption in the future.

The fund's holdings in the financial sector, including in Erste Bank, BBVA, UniCredit and Deutsche Bank, proved beneficial. These lenders posted strong results, which reflected the more favourable operating environment for European banks. Biotechnology company argenx aided relative performance after it posted encouraging trial data for its immunology drug Vyvgart. Siemens Energy was another leading contributor, as the firm's profit margins increased due to supportive supply/demand dynamics in the gas turbine market, driven by increased global energy demand.

The fund purchased Banco Santander and ABN Amro Bank given the favourable outlook for the European financial sector. Spanish multinational electric utility Iberdrola was another addition. We liked the company for its substantial exposure to electricity grids, which are expected to expand. We also added French train manufacturer Alstom. We felt that changes in the management team, along with some positive commentary on the quality of its backlog, had paved the way for a more sustained turnaround in the business. Elsewhere, we added Swiss healthcare company Roche, following some positive developments in its new product pipeline, and Spanish technology and defence company Indra Sistemas, which has been undergoing a period of significant change as it increases its exposure to defence. The company expressed its hope that it would achieve a €10bn order backlog in its defence segment during 2026.

The fund sold its positions in RELX, SAP and Publicis amid uncertainty about the impact that AI would have on these companies. We exited Danish jewellery maker Pandora due to concerns about the firm's growth trajectory. In addition, we profitably sold the position in French construction firm Vinci. We also sold Daimler Truck, which has been impacted by the trucking sector downturn in the US. The company also faced elevated tariff uncertainty, as production for the US market is mainly located in Mexico.

We remain positive about the outlook for European equities. The asset class has delivered strong gains so far in 2025 and the question is whether this performance can be sustained into 2026.

Meaningful change and true structural reforms are crucial for strengthening Europe's competitiveness. Developments in Germany are particularly encouraging: we see a clear intent to raise the structural growth potential of the economy with measures to address existing headwinds (bureaucracy, technology investment and financial regulation), along with significant investment to upgrade infrastructure and defence. We recognise that challenges remain at the EU level, particularly in achieving consensus on regulatory reforms and financial integration. While changes to EU regulation often do not move as fast or as deep as we would like, momentum has more recently reaccelerated and we remain confident that progress is being made.

At the time of writing, European equities continue to trade close to record discounts compared with US stocks, while international investors remain underexposed. We think these factors should provide a margin of safety during periods of macroeconomic volatility. While the fundamental case for banking and defence stocks – the main drivers of European equity performance in 2025 – remain intact, we believe that the market will broaden in 2026. Firstly, the start of a monetary easing cycle in the US bodes well for European companies with cyclical US exposure. Moreover, fiscal stimulus – most notably Germany's €500bn infrastructure package – should start making a real impact over the course of 2026. Additionally, trade tensions are most likely beyond their peak.

We maintain a balanced portfolio with a mixture of both cyclical and defensive stocks.

References made to individual securities do not constitute a recommendation to buy, sell or hold any security, investment strategy or market sector, and should not be assumed to be profitable. Janus Henderson Investors, its affiliated advisor, or its employees, may have a position in the securities mentioned.

Direct transaction costs incurred on securities transactions (including derivatives) are stated after deducting the proportion of the amounts collected from dilution adjustments that relate to direct transaction costs.

Performance values are at close of business on a bid basis, which will differ from those in the Performance summary.

Operating charges
Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures
There were no share classes launched or closed during the period.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Ongoing charge figure

The annualised OCF of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	30/11/25 %	31/05/25 %
Class A accumulation	1.65	1.65
Class C accumulation	0.57	0.57
Class E accumulation	1.15	1.15
Class G accumulation	0.70	0.70
Class G income	0.70	0.70
Class I accumulation	0.88	0.88
Class I income	0.88	0.88

The OCF is an ex-post figure for the financial period which is calculated in accordance with the CESR /10-674.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Risk and reward profile

The fund currently has 7 types of share class in issue: A accumulation, C accumulation, E accumulation, G accumulation, G income, I accumulation and I income.

Each share class has the same risk and reward profile which is as follows:

Potentially lower reward **Potentially higher reward**

Lower risk **Higher risk**

1	2	3	4	5	6	7

The share classes appear at 5 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in Net Asset Value in the past five years than those in lower categories. The lowest category does not mean risk free.

The SRRI is calculated based on historical volatility over a rolling five year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions.

The value of an investment and any income from it can go up or down. When you sell your shares they may be worth less than you paid for them.

The rating above is based on the historic volatility of the share classes. Historic data may not be a reliable indication of the future risk profile of the fund. The rating is not guaranteed and may change over time.

Other material risks not captured by the rating:

Counterparty Risk and Operational Risk The fund could lose money if a counterparty with which the fund trades becomes unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider.

Country or Region If a fund has a high exposure to a particular country or geographical region it carries a higher level of risk than a fund which is more broadly diversified.

Derivatives The fund may use derivatives with the aim of reducing risk or managing the portfolio more efficiently. However this introduces other risks, in particular, that a derivative counterparty may not meet its contractual obligations.

Equities Shares/Units can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.

Exchange Rates If the fund holds assets in currencies other than the base currency of the fund, or you invest in a share/unit class of a different currency to the fund (unless hedged, i.e. mitigated by taking an offsetting position in a related security), the value of your investment may be impacted by changes in exchange rates.

Liquidity Securities within the fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses.

The full list of the fund's risks are contained in the 'Risk Factors' section of the fund's Prospectus.

The risk rating for all share classes decreased from 6 to 5 during the period. The ratings may change over time as a fund takes on more or less risky investments or where market conditions become more or less volatile. At share class level the ratings may differ dependent on the class currency and may be influenced by currency movements and the impact of inflows and outflows.

The SRRI conforms to the ESMA guidelines for the calculation of the SRRI.

Janus Henderson UK & Irish Smaller Companies Fund

Authorised Corporate Director's report

Other information
As the fund has ceased investment activity, standard disclosures relating to the Significant portfolio changes, Investment review, Comparative tables, OCF, Risk and reward profile and Distribution tables have not been presented within the financial statements.

Investment objective and policy up to 18 March 2021
The fund aimed to provide a return, from a combination of capital growth and income over the long term (5 years or more).

The fund invested at least 80% of its assets in shares (also known as equities) of smaller companies, in any industry, in the UK and Ireland. Companies were incorporated, headquartered or derived significant revenue from, the UK or Ireland.

The fund was actively managed with reference to the Numis Sub-£1bn ex Investment Companies Index, which is broadly representative of the companies in which it could have invested in, as this provided a useful comparator for assessing the fund's performance. The Investment Manager had discretion to choose investments for the fund with weightings different to the index or not in the index.

Strategy
The Investment Manager believed that investing in companies was about the future and taking a long term view. The investment process was grounded both in fundamental analysis, which aimed to gain a clear understanding of individual companies and their markets, and in a strong valuation discipline. The universe of potential investments was reduced in stages using broad-based screening and ranking of companies, detailed profiling, meetings with management and the detailed analysis of financial data. The fund had a well-diversified portfolio and normally avoided very small 'micro-cap' companies due to the more difficult nature of buying and selling shares in these companies.

Performance summary

Cumulative performance

	Period from 30 Nov 20 - 18 Mar 21* %	Since inception 30 Dec 94 - 18 Mar 21* %
Class I accumulation (Net)	14.4	1,513.9
Numis Smaller Companies (Ex investment companies and companies with a market capitalisation greater than £1bn) Index	22.2	624.3

Performance summary (continued)

Benchmark usage:

Index: Numis Smaller Companies (Ex investment companies and companies with a market capitalisation greater than £1bn) Index
Index usage: Comparator
Index description: The Numis Smaller Companies (Ex investment companies and companies with a market capitalisation greater than £1bn) Index is a measure of the combined performance of smaller companies (the bottom 10%) listed on the London Stock Exchange excluding investment companies and companies with a market capitalisation greater than £1bn. It provides a useful comparison against which the fund's performance can be assessed over time.

Peer group: IA UK Smaller Companies Sector
Peer group usage: Comparator
Peer group description: The IA groups funds with similar geographic and/or investment remit into sectors. The fund's ranking within the sector (as calculated by a number of data providers) can be a useful performance comparison against other funds with similar aims.

Past performance does not predict future returns. The value of an investment and the revenue from it can fall as well as rise as a result of market and currency fluctuations and you may not get back the amount originally invested.

Janus Henderson US Growth Fund

Authorised Corporate Director's report

Investment Fund Managers
Nick Schommer and Brian Recht

Investment objective and policy
The fund aims to provide capital growth over the long term.

Performance target: To outperform the S&P 500 Index by at least 2.5% per annum, before the deduction of charges, over any 5 year period.

The fund invests at least 80% of its assets in a concentrated portfolio of shares (also known as equities) of companies, of any size, in any industry, in the United States. Companies will have their registered office in or do most of their business (directly or through subsidiaries) in the United States. The portfolio may be concentrated in terms of its number of holdings and/or the size of its largest holdings.

The fund may also invest in other assets including CIS (including those managed by Janus Henderson), cash and money market instruments. The Investment Manager may use derivatives (complex financial instruments) to reduce risk or to manage the fund more efficiently.

The fund is actively managed with reference to the S&P 500 Index, which is broadly representative of the companies in which it may invest, as this forms the basis of the fund's performance target. The Investment Manager has discretion to choose investments for the fund with weightings different to the index or not in the index.

Strategy
The Investment Manager follows a fundamental, research-driven strategy, seeking to identify innovative companies with distinct advantages over their competitors, which allow them to protect market share and/or profitability. The fund invests in the manager's best US large growth company ideas, where they believe their view is differentiated from the market, to construct a portfolio of typically 30 to 40 holdings.

Performance summary (continued)
Source: Morningstar
Class I accumulation (Net), NAV to NAV, net of fees and net income reinvested as at 12 noon valuation point.
Class I accumulation (Gross), NAV to NAV, gross of OCF and net income reinvested as at 12 noon valuation point.

Benchmark values are as at close of business.

Class I accumulation is disclosed as it is the representative share class.

Benchmark usage:
Index: S&P 500 Index
Index usage: Target
Index description: The S&P 500 Index is a measure of the combined performance of 500 large companies listed on US stock markets. It forms the basis for the fund's performance target.

Peer group: IA North America Sector
Peer group usage: Comparator
Peer group description: The IA groups funds with similar geographic and/or investment remit into sectors. The fund's ranking within the sector (as calculated by a number of data providers) provides a useful performance comparison against other funds with similar aims.

Past performance does not predict future returns. The value of an investment and the revenue from it can fall as well as rise as a result of market and currency fluctuations and you may not get back the amount originally invested.

Investment review

The fund returned 19.7% (Net), 20.2% (Gross) based on Class I accumulation over the period under review, compared with a return of 18.6% in the S&P 500 Index, a return of 20.1% in the Target Index + 2.5% and a return of 15.0% in the IA North America Sector peer group benchmark.

US stocks, as measured by the S&P 500 Index, delivered strong results over the reporting period, fuelled by resilient economic growth, positive expectations about AI and reduced tariff uncertainty. The Fed lowered interest rates by 25 bps in both September and October and signalled a continued gradual approach to rate cutting given both slowing jobs growth and higher inflation.

Stock selection in the consumer discretionary and financial sectors detracted from relative performance. Stock selection in the healthcare and IT sectors contributed.

Taiwan Semiconductor Manufacturing was a positive contributor. As one of the world's dominant microchip manufacturers, Taiwan Semiconductor Manufacturing is the leading supplier of graphics processing units for companies, such as Nvidia, that are at the forefront of AI development. Excitement grew about the AI supply chain as leading 'hyperscalers' (large-scale data centre operators) and other technology companies announced substantive investments in high-performance computing. We believed Taiwan Semiconductor Manufacturing was well positioned due to its unparalleled scale, deep technological advantages, and partnerships with major semiconductor companies and hyperscalers.

Broadcom, another contributor, supplies semiconductors and infrastructure software solutions. Like Taiwan Semiconductor Manufacturing, Broadcom has benefited from increased investment in AI infrastructure, with the company reporting strong financial performance and guidance. Management expects a material acceleration in AI revenue growth in the 2026 fiscal year, supported by new orders and its relationships with companies such as OpenAI, Google and Meta.

MercadoLibre, a relative detractor, is a leading online retailer and financial technology company in Latin America. The company has faced increased competition from other online retailers, and it has offered free shipping and other promotions to drive market share gains and revenue growth. However, investors worried about the impact of these promotions on its margins and profitability, and the shares declined. We continued to appreciate MercadoLibre as the dominant operator in Latin America, where e-commerce and financial technology are not as widely adopted as other regions.

Core & Main, another detractor, distributes products used in storm drainage and other large water-related infrastructure projects. The shares sold off in the third quarter of 2025 after the company missed its earnings targets, in part due to some higher costs and margin pressures. Investor worries about a weaker residential construction market also pressured the shares. We trimmed the position due to near-term uncertainty, but we remained invested as we believed the company was well placed, given trends such as nearshoring, electrification and investments in AI.

We see reasons for optimism. The economy has started to accelerate out of a period of uncertainty following the initial tariff announcements. Consumer spending has remained resilient, especially for upper income households that have benefited from asset appreciation, as well as wage growth that has outpaced inflation. The Fed has started cutting rates, which could lead to a broadening of economic growth that may benefit a wider range of companies.

We remain excited about powerful secular trends driving economic growth and market gains. We have continued to see accelerating demand for AI cloud-based workloads, which has driven a rapid pace of hyperscaler investment in AI infrastructure. We have started to see revenue-generating opportunities move beyond infrastructure companies to the application layer, where we anticipate generational advances in productivity as companies across industries integrate AI into core offerings, from workflow automation to specialised industrial applications.

Beyond AI, we are upbeat on other secular drivers of economic growth, including cloud migration, digitisation, healthcare innovation and reshoring, which have led to new investments in domestic manufacturing in industries from semiconductors to pharmaceuticals. We have also identified opportunities in power management companies that have benefited from the surge in data centre construction needed to support AI infrastructure. In our view, companies aligned with these secular trends have the potential to compound growth and gain market share across economic cycles.

While we continue to monitor these broader themes, along with macroeconomic developments, our primary focus remains on bottom-up stock selection. We continue to evaluate business models as we seek to identify competitively advantaged companies in healthy, growing end markets. We remain committed to looking beyond high-profile stocks, many of which have traded at elevated valuations, to compelling ideas that may be underappreciated by other investors. We believe such investments may offer long-term growth potential at attractive valuations. Through this disciplined, bottom-up approach, we believe we can deliver long-term growth in capital to our investors.

The fund did not use derivatives.

References made to individual securities do not constitute a recommendation to buy, sell or hold any security, investment strategy or market sector, and should not be assumed to be profitable. Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Comparative tables (continued)

Performance values are at close of business on a bid basis, which will differ from those in the Performance summary.

Operating charges
Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures
There were no share classes launched or closed during the period.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Ongoing charge figure

The annualised OCF of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	30/11/25 %	31/05/25 %
Class A accumulation	1.65	1.65
Class C accumulation[1]	0.55	0.57
Class E accumulation	1.15	1.15
Class I accumulation	0.85	0.85

[1] Due to the small size of the share class, the expenses charged are not reflective of the rates disclosed in the Prospectus. Therefore, the reported OCF is not indicative of future expenses expected as the share class grows in size.

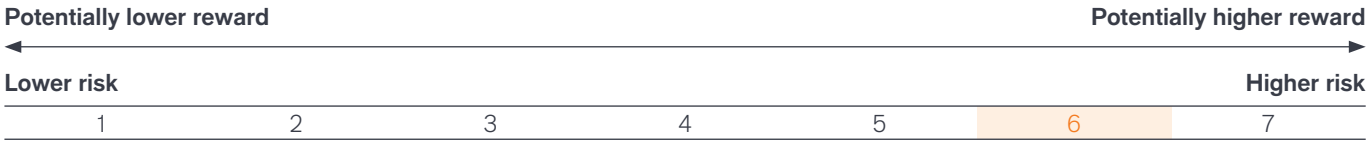

The OCF is an ex-post figure for the financial period which is calculated in accordance with the CESR /10-674.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Risk and reward profile

The fund currently has 4 types of share class in issue: A accumulation, C accumulation, E accumulation and I accumulation.

Each share class has the same risk and reward profile which is as follows:

The share classes appear at 6 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in Net Asset Value in the past five years than those in lower categories. The lowest category does not mean risk free.

The SRRI is calculated based on historical volatility over a rolling five year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions.

The value of an investment and any income from it can go up or down. When you sell your shares they may be worth less than you paid for them.

The rating above is based on the historic volatility of the share classes. Historic data may not be a reliable indication of the future risk profile of the fund. The rating is not guaranteed and may change over time.

Other material risks not captured by the rating:

Concentration This fund may have a particularly concentrated portfolio relative to its investment universe or other funds in its sector. An adverse event impacting even a small number of holdings could create significant volatility or losses for the fund.

Counterparty Risk and Operational Risk The fund could lose money if a counterparty with which the fund trades becomes unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider.

Country or Region If a fund has a high exposure to a particular country or geographical region it carries a higher level of risk than a fund which is more broadly diversified.

Derivatives The fund may use derivatives with the aim of reducing risk or managing the portfolio more efficiently. However this introduces other risks, in particular, that a derivative counterparty may not meet its contractual obligations.

Equities Shares/Units can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.

Exchange Rates If the fund holds assets in currencies other than the base currency of the fund, or you invest in a share/unit class of a different currency to the fund (unless hedged, i.e. mitigated by taking an offsetting position in a related security), the value of your investment may be impacted by changes in exchange rates.

Investment Style - Growth The fund follows a growth investment style that creates a bias towards certain types of companies. This may result in the fund significantly underperforming or outperforming the wider market.

Liquidity Securities within the fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses.

The full list of the fund's risks are contained in the 'Risk Factors' section of the fund's Prospectus.

There has been no change to the risk rating during the period.

The SRRI conforms to the ESMA guidelines for the calculation of the SRRI.

Janus Henderson Absolute Return Fund

Authorised Corporate Director's report

Investment Fund Managers
Ben Wallace and Luke Newman

Investment objective and policy
The fund aims to provide a positive (absolute) return, regardless of market conditions, over any 12 month period. A positive return is not guaranteed over this or any other time period, and particularly over the shorter term the fund may experience periods of negative returns. Consequently your capital is at risk.

Performance target: To outperform the UK Base Interest Rate, after the deduction of charges, over any 3 year period.

The fund invests in shares and makes extensive use of derivatives (complex financial instruments) to take both 'long' and 'short' positions in companies the Investment Manager believes will either rise in value (long positions) or fall in value (short positions) meaning that the fund may benefit from either scenario.

The fund will hold a significant proportion of its assets in cash and money market instruments as a result of holding derivatives and for when the Investment Manager wishes to take a defensive stance. Conversely, the fund may also employ 'leverage' (so that the fund can invest a greater amount than its actual value) when the Investment Manager has greater confidence in the opportunities available.

Typically, at least 60% of the exposure to the long and short positions (in aggregate) will be to companies of any size, in any industry, in the UK. Companies may be incorporated or headquartered in the UK, deriving significant revenue from the UK, or constituents of the FTSE All Share Index. Up to 40% of the long and short exposure may be to non-UK companies.

The fund may also hold other assets including CIS (including those managed by Janus Henderson). The Investment Manager may also use derivatives (complex financial instruments) to reduce risk or to manage the fund more efficiently.

The fund is actively managed and makes reference to the UK Base Interest Rate as this forms the basis of the fund's performance target and the calculation of performance fees (if applicable). The Investment Manager has complete discretion to choose investments for the fund and is not constrained by a benchmark.

Strategy
The Investment Manager targets positive returns in all market conditions, with low correlation to movements in stock markets and with lower volatility. The Fund Managers blend core long term and tactical short term ideas to construct the portfolio. Ideas come from a variety of sources including proprietary research, external research and other Janus Henderson investment teams, with the intention of taking long positions in companies with unexpected earnings growth or value creation potential, and short positions in companies where earnings are priced in or where long term value is impaired.

Performance summary

Cumulative performance

	Six months 31 May 25 - 30 Nov 25 %	One year 30 Nov 24 - 30 Nov 25 %	Three years 30 Nov 22 - 30 Nov 25 %	Five years 30 Nov 20 - 30 Nov 25 %	Since inception 29 Apr 09 - 30 Nov 25 %
Class I accumulation (Net)	3.4	7.0	23.2	27.3	119.7
UK Base Interest Rate	2.1	4.5	15.2	16.8	23.5

Discrete performance	30 Nov 24 - 30 Nov 25 %	30 Nov 23 - 30 Nov 24 %	30 Nov 22 - 30 Nov 23 %	30 Nov 21 - 30 Nov 22 %	30 Nov 20 - 30 Nov 21 %
Class I accumulation (Net)	7.0	7.9	6.6	0.6	2.7
UK Base Interest Rate	4.5	5.4	4.7	1.2	0.1

Please note that the performance target is to be achieved over a specific annualised time period. Refer to the investment objective and policy above.

Performance summary (continued)

Benchmark values are as at close of business.

Class I accumulation is disclosed as it is the representative share class.

Benchmark usage:
Index: UK Base Interest Rate
Index usage: Target
Index description: The UK Base Interest Rate is the interest rate set by the BoE. It is the performance target of the fund.

Past performance does not predict future returns. The value of an investment and the revenue from it can fall as well as rise as a result of market and currency fluctuations and you may not get back the amount originally invested.

Investment review

The fund returned 3.4% based on Class I accumulation (Net) over the period under review, compared with a return of 2.1% in the UK Base Interest Rate.

Global equities rose over the reporting period, as trade tensions eased and the Fed restarted its interest rate-cutting campaign. The gains helped stock indices across the globe, including the MSCI World Index, hit record highs. Continued excitement about AI boosted technology shares, although the sector also faced worries about high valuations.

In Europe, easier borrowing conditions, relief over a trade deal with the US and the prospect of increased defence spending in the region drove the regional index to a record high. Despite the upbeat market sentiment, political uncertainty – particularly in France – caused some volatility.

In the UK, fiscal policy dominated investor attention, with the Budget statement towards the end of the period offering reassurance through larger-than-expected fiscal headroom and a reduced gilt issuance requirement. This helped to ease concerns about government funding pressures.

In the long book, the core holding in UK public services outsourcer Serco continued to generate positive performance, supported by the announcement of a new contract to provide training services to the US Air Force. This highlighted the sustained momentum in the group's contract pipeline. The core position in medical equipment manufacturer Smith & Nephew also contributed positively. While the share price gave back some gains in November, the position proved constructive overall, driven by ongoing signs of operational turnaround and, notably, a surprise share buyback announced during its second-quarter results.

The holdings in UK banks contributed as their shares were supported by encouraging earnings updates. Towards the end of the period, these positions benefited from confirmation in the UK Budget statement that no additional levies would be imposed.

Key detractors in the long book included data and analytics provider RELX and credit agency Experian. Concerns about AI disruption remained a headwind for these businesses. However, we believed that they were better insulated from this risk than what was reflected in market valuations, particularly given the active deployment of AI tools within their operations.

In the short book, a tactical position in a UK budget hotel operator contributed positively. Its shares fell due to the anticipated cost pressures from business rate changes announced in the UK Budget. A short position in a UK house builder was also beneficial, as weak trading conditions contrasted with optimism about the broader sector later in the period. This underscored the relative strength of the long positions in Persimmon and Bellway, both of which contributed positively. The short position in index futures detracted due to the broad equity market strength during the period.

Continued elevated levels of stock dispersion remained a positive for the fund, with several new core and tactical positions initiated. We continued to take profits in UK banks, driven by disciplined valuation considerations and a reassessment of the longer-term benefits in a lower rate environment. The proceeds were rotated into select real estate investment trusts and home builders, in line with our 'barbell' approach to balance this exposure with interest rate-sensitive assets. The tactical book participated in the initial public offerings of Noba Bank and Verisure, both of which were exited after strong initial rallies.

Later in the period, volatility around the UK Budget created several tactical opportunities. For example, we scaled up a long position in IG (having reduced the position coming into the Budget) following confirmation that spread-betting duties would remain unchanged, which was a positive surprise after previous speculation of tax hikes. The position contributed positively as investor sentiment normalised.

In the short book, we reduced the short exposure to US consumer-facing businesses following sharp valuation resets and initiated a tactical long position in a US spirits producer. We felt this position offered an attractive valuation, especially given the rate-cutting environment, with a tax refund programme beginning in 2026.

Financial markets have contended with significant volatility throughout 2025. Against a backdrop of heightened macroeconomic and geopolitical uncertainty, we believe the importance of diversifying absolute return solutions has become increasingly evident, particularly those designed to capitalise on heightened trading opportunities amid elevated volatility and dispersion. Greater separation between the winners and losers within equity markets has created an environment ripe with opportunities on both the long and the short side. We believe that a strategy targeting a consistent real return regardless of market direction, with the potential to generate positive performance in weaker periods, serves an important purpose in navigating the current investment landscape.

References made to individual securities do not constitute a recommendation to buy, sell or hold any security, investment strategy or market sector, and should not be assumed to be profitable. Janus Henderson Investors, its affiliated advisor, or its employees, may have a position in the securities mentioned.

Direct transaction costs incurred on securities transactions (including derivatives) are stated after deducting the proportion of the amounts collected from dilution adjustments that relate to direct transaction costs.

Performance values are at close of business on a bid basis, which will differ from those in the Performance summary.

Operating charges
Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures
There were no share classes launched or closed during the period.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Ongoing charge figure

The annualised OCF of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	30/11/25 excluding performance fees %	30/11/25 including performance fees %	31/05/25 excluding performance fees %	31/05/25 including performance fees %
Class A accumulation	1.68	1.96	1.68	2.09
Class E accumulation	1.18	1.50	1.18	1.72
Class G accumulation	0.83	1.12	0.82	1.39
Class I accumulation	1.07	1.40	1.07	1.59

The OCF is an ex-post figure for the financial period which is calculated in accordance with the CESR /10-674.

	Performance fees 30/11/25 %	Performance fees 30/11/25 £	Performance fees 31/05/25 %	Performance fees 31/05/25 £
Class A accumulation	0.28	89,891.24	0.41	123,327.73
Class E accumulation	0.32	2,520.66	0.54	3,242.38
Class G accumulation	0.29	1,761,022.39	0.57	2,436,507.03
Class I accumulation	0.33	1,651,885.28	0.52	2,464,750.80

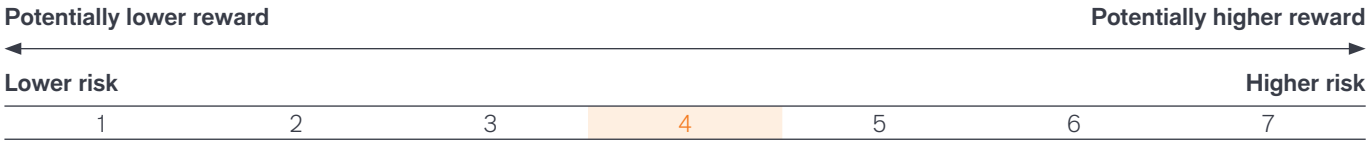

The performance fees are disclosed in accordance with the guidelines issued by ESMA.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Risk and reward profile

The fund currently has 4 types of share class in issue: A accumulation, E accumulation, G accumulation and I accumulation.

Each share class has the same risk and reward profile which is as follows:

The share classes appear at 4 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in Net Asset Value in the past five years than those in lower categories. The lowest category does not mean risk free.

The SRRI is calculated based on historical volatility over a rolling five year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions.

The value of an investment and any income from it can go up or down. When you sell your shares they may be worth less than you paid for them.

The rating above is based on the historic volatility of the share classes. Historic data may not be a reliable indication of the future risk profile of the fund. The rating is not guaranteed and may change over time.

Other material risks not captured by the rating:

Counterparty Risk and Operational Risk The fund could lose money if a counterparty with which the fund trades becomes unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider.

Country or Region If a fund has a high exposure to a particular country or geographical region it carries a higher level of risk than a fund which is more broadly diversified.

Derivatives and Leverage The fund may use derivatives to help achieve its investment objective. This can result in leverage (higher levels of debt), which can magnify an investment outcome. Gains or losses to the fund may therefore be greater than the cost of the derivative. Derivatives also introduce other risks, in particular, that a derivative counterparty may not meet its contractual obligations.

Equities Shares/Units can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.

Exchange Rates If the fund holds assets in currencies other than the base currency of the fund, or you invest in a share/unit class of a different currency to the fund (unless hedged, i.e. mitigated by taking an offsetting position in a related security), the value of your investment may be impacted by changes in exchange rates.

Liquidity Securities within the fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses.

The full list of the fund's risks are contained in the 'Risk Factors' section of the fund's Prospectus.

There has been no change to the risk rating during the period.

The SRRI conforms to the ESMA guidelines for the calculation of the SRRI.

Janus Henderson European Absolute Return Fund

Authorised Corporate Director's report

Investment Fund Manager
Robert Schramm-Fuchs

Investment objective and policy
The fund aims to provide a positive (absolute) return, regardless of market conditions, over any 12 month period. A positive return is not guaranteed over this or any other time period, and particularly over the shorter term the fund may experience periods of negative returns. Consequently your capital is at risk.

Performance target: To outperform the Sterling Overnight Index Average (SONIA) + 1%, after the deduction of charges, over any 3 year period.

The fund invests in shares and makes extensive use of derivatives (complex financial instruments) to take both 'long' and 'short' positions in companies the Investment Manager believes will either rise in value (long positions) or fall in value (short positions) meaning that the fund may benefit from either scenario.

The fund will hold a significant proportion of its assets in cash and money market instruments as a result of holding derivatives and for when the Investment Manager wishes to take a defensive stance. Conversely, the fund may also employ 'leverage' (so that the fund can invest a greater amount than its actual value) when the Investment Manager has greater confidence in the opportunities available.

At least 80% of the exposure to the long and short positions (in aggregate) will be to companies of any size, in any industry, in Europe (including UK). Companies may be located or do most of their business in this region. The balance of the long and short exposure may be to companies outside this region.

The fund may also invest in CIS (including those managed by Janus Henderson).

The Investment Manager may also use derivatives (complex financial instruments) to reduce risk or to manage the fund more efficiently.

The fund is actively managed and makes reference to SONIA as this forms the basis of the fund's performance target and the calculation of performance fees (if applicable). The Investment Manager has complete discretion to choose investments for the fund and is not constrained by a benchmark.

Strategy
The Investment Manager targets long-term capital appreciation through exposure primarily to European equities. The manager selects stocks using a fundamental approach, blended with sector themes. The process results in a high-conviction portfolio with a bias towards long positions (where the manager believes the prospects for the companies are positive), complemented by 'short positions' (where prospects are less positive) and other market hedging securities.

Performance summary

Cumulative performance	**Six months 31 May 25 - 30 Nov 25 %**	**One year 30 Nov 24 - 30 Nov 25 %**	**Three years 30 Nov 22 - 30 Nov 25 %**	**Five years 30 Nov 20 - 30 Nov 25 %**	**Since inception 29 Jan 09 - 30 Nov 25 %**
Class I accumulation (Net)	5.9	13.8	31.4	40.2	174.0
SONIA + 1%*	2.6	5.5	18.5	21.8**	29.0**

Performance summary (continued)
* From 1 June 2021, the fund benchmark changed from the UK Base Interest Rate to SONIA.
** Performance is a blend of the old and new benchmark.

Source: Morningstar
Class I accumulation (Net), NAV to NAV, net of fees and net income reinvested as at 12 noon valuation point.

Benchmark values are as at close of business.

Class I accumulation is disclosed as it is the representative share class.

Benchmark usage:
Index: SONIA + 1%
Index usage: Target
Index description: SONIA reflects the average of the interest rates that banks pay to borrow sterling overnight from other financial institutions. The BoE is the administrator for SONIA and they are responsible for its governance and publication every London business day. It is the basis for the fund's performance target.

Past performance does not predict future returns. The value of an investment and the revenue from it can fall as well as rise as a result of market and currency fluctuations and you may not get back the amount originally invested.

Investment review

The fund returned 5.9% based on Class I accumulation (Net) over the period under review, compared with a return of 2.1% in the SONIA + 1%.

European equities rose during the reporting period due to easier borrowing conditions, relief over a trade deal with the US and the prospect of increased defence spending in the region.

Meanwhile, fresh monetary stimulus is pushing aside peak liquidity concerns. The Fed cut interest rates again and even restarted a form of quantitative easing, albeit this time with asset purchases on the short end of the bond market, where most of the new issuance is concentrated. Notably, these measures precede the appointment of the incoming, and presumably more dovish, Fed chairman, which suggests that the path ahead is skewed toward a deeper monetary policy easing cycle. At the same time, this combines with a strong fiscal impulse on both sides of the Atlantic, as well as deregulation. Many of the trade and tariff issues that overshadowed most of 2025 seem to either have been resolved (for now) or kicked down the road. Thus, the underlying macroeconomic cycle is more likely to accelerate in 2026. This seems to be the ideal combination for a broadening out of the market and perhaps some unexpected, temporary new market leadership. Historically in interest rate-cutting cycles, consumer discretionary and financial services were among the best performers, while technology often fared just in line or slightly worse. The AI trade as such, and in particular some of its most notable winners, have begun struggling in share price terms.

A factor that has driven some rotation in markets more recently – and could create further unexpected winners and losers among European equities – is the potential for a Ukraine peace agreement. Defence stocks have come under significant pressure, while prospective beneficiaries have yet to see any meaningful boost. Given the highly uncertain outcome and the apparent divergence between US and EU positions on the peace process and its conditions, the prevailing consensus seems to be 'selling what one owns' rather than 'buying what one does not'.

The fund's long banking positions, including Erste Bank and Deutsche Bank, were key contributors to performance. These lenders posted strong results, which reflected the more favourable operating environment for European banks. The holding in Greece's Alpha Bank was also additive. Other key contributors included the long positions in biotechnology company argenx and Swiss dermatology company Galderma.

The long position in advertising agency Publicis detracted amid concerns about possible AI disruption in the future. Shares in software group Nemetschek came under pressure for similar reasons.

In the short book, notable contributors were the short positions in a German medical technology firm and a chemical maker. Conversely, a short position in a wind turbine maker detracted. Market index hedges also hampered performance, due to the broad strength in equities during the period.

We have made some changes to the fund's positioning. On the long side of the book, three banks (Erste Bank, ABN Amro Bank and Unicredit) occupy the top spots, although they are closely followed by a number of consumer discretionary names, including IHG, LVMH, BMW and Ryanair. On the short side, the positions are all very stock specific and there is no identifiable theme. The largest short positions are in a medical technology firm, a travel software company, an industrial gases firm, and an accounting, payroll and tax software business.

Europe faces significant structural and geopolitical challenges. It is caught between global superpowers (US, China and Russia) while grappling with weak demographics, political tensions from mass immigration and limited fiscal capacity due to high debt levels. Many issues are self-inflicted: decades of underinvestment in defence following the end of the Cold War, a failure to deepen political union and a reliance on transfer-funded pensions rather than capital accumulation. This has left Europe without deep capital markets, overly dependent on bank lending and lacking a true capital markets union.

Regulatory overreach, combined with scarce funding sources, has stifled innovation and new business formation. Competitiveness has eroded due to rigid labour markets, heavy taxation and persistent intra-European trade barriers. These weaknesses make Europe vulnerable to external shocks such as the Ukraine conflict and potential US disengagement.

On the positive side, reform momentum is building following the Mario Draghi report (2024) on EU competitiveness, although progress is slow given complex EU governance. Europe's major advantage lies in household wealth: €40trn in savings versus €18trn GDP, with €1.5trn added annually – much of which sits idle in cash. Unlocking these savings is critical, primarily through banking reform and, longer term, the EU savings and investment union (expected after 2027).

Banking reform is urgent. Since the global financial crisis, stringent capital requirements have curtailed lending, with inflation-adjusted volumes declining for 15 years. Recent European Central Bank recommendations suggest dismantling these constraints, signalling a potential overhaul of European banking. This could reshape financing dynamics and create significant opportunities in European large caps by 2026 – both long and short.

References made to individual securities do not constitute a recommendation to buy, sell or hold any security, investment strategy or market sector, and should not be assumed to be profitable. Janus Henderson Investors, its affiliated advisor, or its employees, may have a position in the securities mentioned.

Performance values are at close of business on a bid basis, which will differ from those in the Performance summary.

Operating charges
Operating charges are expenses associated with the maintenance and administration of the fund on a day-to-day basis that are actually borne by the share class.

Share class launches and closures
There were no share classes launched or closed during the period.

Hedged share classes
Class I EUR Hedged accumulation and Class I USD Hedged accumulation are hedged share classes. Hedged share classes allow the ACD to use currency hedging transactions to reduce the effect of fluctuations in the rate of exchange between the currency of shares in those classes and sterling which is the base currency of the fund.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Ongoing charge figure

The annualised OCF of the fund is calculated as the ratio of the total ongoing charges to the average net asset value for twelve months. Ongoing charges are all expenses deducted from the assets of the fund during the period, except for expenses that are explicitly excluded by regulation.

	30/11/25 excluding performance fees %	30/11/25 including performance fees %	31/05/25 excluding performance fees %	31/05/25 including performance fees %
Class A accumulation	1.76	2.26	1.77	1.77
Class E accumulation	1.27	1.93	1.27	1.27
Class I accumulation	0.92	1.69	0.92	0.92
Class I EUR Hedged accumulation	0.91	1.70	0.92	0.92
Class I USD Hedged accumulation	0.87[1]	1.20	0.91	0.91

[1] Due to the small size of the share class, the expenses charged are not reflective of the rates disclosed in the Prospectus. Therefore, the reported OCF is not indicative of future expenses expected as the share class grows in size.

The OCF is an ex-post figure for the financial period which is calculated in accordance with the CESR /10-674.

	Performance fees 30/11/25 %	Performance fees 30/11/25 £	Performance fees 31/05/25 %	Performance fees 31/05/25 £
Class A accumulation	0.50	1,010.67	-[2]	1.22
Class E accumulation	0.66	12,322.77	-[2]	3.54
Class I accumulation	0.77	138,363.68	-[2]	329.98
Class I EUR Hedged accumulation	0.79	4,489.40	-	-
Class I USD Hedged accumulation	0.33	26.69	-	-

[2] Reported as zero as rounded to 0.00%.

The performance fees are disclosed in accordance with the guidelines issued by ESMA.

Docusign Envelope ID: A7EEFB94-D0E5-49BC-A73E-A5A0ADD39C2D

Risk and reward profile

The fund currently has 5 types of share class in issue: A accumulation, E accumulation, I accumulation, I EUR Hedged accumulation and I USD Hedged accumulation.

Each share class has the same risk and reward profile which is as follows:

Potentially lower reward **Potentially higher reward**

Lower risk **Higher risk**

1	2	3	4	5	6	7

The share classes appear at 4 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in Net Asset Value in the past five years than those in lower categories. The lowest category does not mean risk free.

The SRRI is calculated based on historical volatility over a rolling five year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions.

The value of an investment and any income from it can go up or down. When you sell your shares they may be worth less than you paid for them.

The rating above is based on the historic volatility of the share classes. Historic data may not be a reliable indication of the future risk profile of the fund. The rating is not guaranteed and may change over time.

Other material risks not captured by the rating:

Counterparty Risk and Operational Risk The fund could lose money if a counterparty with which the fund trades becomes unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider.

Country or Region If a fund has a high exposure to a particular country or geographical region it carries a higher level of risk than a fund which is more broadly diversified.

Currency Hedging When the fund, or a share/unit class, seeks to mitigate exchange rate movements of a currency relative to the base currency (hedge), the hedging strategy itself may positively or negatively impact the value of the fund due to differences in short-term interest rates between the currencies.

Derivatives and Leverage The fund may use derivatives to help achieve its investment objective. This can result in leverage (higher levels of debt), which can magnify an investment outcome. Gains or losses to the fund may therefore be greater than the cost of the derivative. Derivatives also introduce other risks, in particular, that a derivative counterparty may not meet its contractual obligations.

Equities Shares/Units can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.

Exchange Rates If the fund holds assets in currencies other than the base currency of the fund, or you invest in a share/unit class of a different currency to the fund (unless hedged, i.e. mitigated by taking an offsetting position in a related security), the value of your investment may be impacted by changes in exchange rates.

Liquidity Securities within the fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses.

The full list of the fund's risks are contained in the 'Risk Factors' section of the fund's Prospectus.

There has been no change to the risk rating during the period.

The SRRI conforms to the ESMA guidelines for the calculation of the SRRI.

Appendix - additional information

Securities financing transactions

The funds engage in securities financing transactions (SFTs) (as defined in Article 3 of Regulation (EU) 2015/2365, as amended by the Transparency of Securities Financing Transactions and Reuse (Amendment) (EU Exit) Regulations 2019, SFTs include repurchase transactions, securities or commodities lending and securities or commodities borrowing, buy-sell back transactions or sell-buy back transactions and margin lending transactions). In accordance with Article 13 of the Regulation (EU) 2015/2365, as amended by the Transparency of Securities Financing Transactions and Reuse (Amendment) (EU Exit) Regulations 2019, the funds' involvement in and exposures related to securities lending for the six months 30 November 2025 are detailed below.

Global data

The table lists the amount of securities on loan as a proportion of total lendable assets and the funds' AUM as at 30 November 2025:

Fund	Market value of securities on loan £000	% of lendable assets	% of AUM
Janus Henderson China Opportunities Fund	13,841	7.55	7.49
Janus Henderson European Focus Fund	2,517	0.81	0.79
Janus Henderson European Selected Opportunities Fund	28,674	1.78	1.73
Janus Henderson US Growth Fund	1,366	0.32	0.32

Concentration data

The following table lists the ten largest issuers by value of non-cash collateral received by each fund by way of SFTs as at 30 November 2025:

Issuer	Market value of collateral received £000	Issuer	Market value of collateral received £000
Janus Henderson China Opportunities Fund		**Janus Henderson European Focus Fund***	
US Treasury	10,559	US Treasury	2,386
Government of Japan	1,643	Government of France	208

All collateral is held in segregated accounts.

The lending and collateral transactions are on an open basis and can be recalled on demand.

Re-use of collateral

Cash collateral may be reinvested during the loan transaction to generate additional returns for the benefit of the fund, however there was no collateral reinvested during the period.

Return and cost on securities lending activities

The following table details the funds' return and costs for each type of SFTs for the six months ended 30 November 2025:

Fund	Total gross amount of stock lending revenue £000	Direct and indirect costs and fees deducted by securities lending agent £000	Net stock lending revenue retained by the fund £000	% return retained by the securities lending agent	% return retained by the fund
Janus Henderson China Opportunities Fund	36	3	33	8	92
Janus Henderson European Focus Fund	11	1	10	8	92
Janus Henderson European Selected Opportunities Fund	47	4	43	8	92
Janus Henderson US Growth Fund	1	-*	1	8	92
Janus Henderson Absolute Return Fund	35	3	32	8	92
Janus Henderson European Absolute Return Fund	-*	-*	-*	8	92

* Due to rounding to the nearest thousand, stock lending revenue and commissions deducted by the securities lending agent are below the minimum reporting threshold.
