JGBL LN

GLOBAL RESEARCH-ENGINEERED EQUITY ACTIVE CORE UCITS ETF

USD Acc ISIN IE000Y3FZEN4

Investment objective

The Fund aims to outperform the Index Benchmark, MSCI World (the Index), over the long term by investing in an actively managed portfolio of equity securities and/or depositary receipts issued by global companies.

For the fund's investment policy, refer to the Additional fund information on page 3.
Past performance does not predict future returns.

Performance (%)

Due to current regulations we are only permitted to show performance if the share class is more than one year old.
The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested.

Additional fund information

Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. Janus Henderson does not currently levy a redemption charge. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. This is an Irish collective asset-management vehicle regulated by the Central Bank of Ireland. Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations. To obtain our prospectus and any additional information please visit our website on: www.janushenderson.com. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund. Cash balances and exposures are based on settled and unsettled trades as at the reporting date.

Investment policy

Under normal circumstances, the Fund will invest at least 80% of its assets in equity securities or depositary receipts issued by global developed market companies. It may also invest up to 15% of its assets in equity securities and/or depositary receipts of emerging market companies. The Fund may invest in companies of any size in any industry. The Fund may also hold cash. It may use derivatives for the purposes of hedging/risk reduction and will use FX forwards to hedge currency risk in hedged Share Classes.

Investment strategy

The Fund is actively managed in reference to the Index. The Investment Manager selects and weights securities using as inputs the research and recommendations of its "Central Research Team", quantitative inputs and ESG data. The portfolio is constructed to emphasise stock selection and minimise unintended risks. It will typically have between 125 and 275 holdings (and is not expected to have fewer than 125 holdings). The Fund may also hold securities that are not in the Index, including securities issued by emerging market companies. The composition of the Fund will therefore differ significantly from the Index. The Investment Manager will seek to manage the Fund's risk profile relative to the Index by keeping sector weights within +/- 5% of their weights in the Index (and typically within +/- 2%) and targeting (ex-ante) annualised tracking error of 1 - 2% relative to the Index.

Fund specific risks

Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result. Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times. Emerging markets expose investors to higher volatility and greater risk of loss than developed markets; they are susceptible to adverse political and economic events, and may be less well regulated with less robust custody and settlement procedures. High exposure to a particular country or geographical region carries a higher level of risk than a more broadly diversified portfolio. Derivatives may be used with the aim of reducing risk or managing the portfolio more efficiently. However, this introduces other risks, in particular, that a derivative counterparty may not meet its contractual obligations. Securities could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses. Losses could be incurred if a counterparty became unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider.

Glossary

Active share
This measures how much a portfolio's holdings differ from its benchmark index. For example, a portfolio with an active share of 60% indicates that 60% of its holdings differ from its benchmark, while the remaining 40% mirror the benchmark.

Price-to-book (P/B) ratio
A financial ratio used to value a company's shares. It is calculated by dividing a company's market value (share price) by the book value of its equity (value of the company's assets on its balance sheet). A P/B value <1 can indicate a potentially undervalued company or a declining business. The higher the P/B ratio, the higher the premium the market is willing to pay for the company above the book (balance sheet) value of its assets.

Price-to-earnings (P/E) ratio
A popular ratio used to value a company's shares, compared to other stocks, or a benchmark index. It is calculated by dividing the current share price by its earnings per share.

Weighted average market cap
The average market capitalisation of a holding, weighted by the size of that position in a portfolio or index.
