Fund aim

The Fund aims to provide a sustainable income return with the prospect for capital growth whilst maintaining a moderately high level of volatility over the medium to long term. Observing the forecast volatility of parameters will be prioritised over the generation of income and capital growth. The Fund invests in collective Investment Schemes (funds that invest in shares, bonds, real estate, commodities futures from the UK and elsewhere) including exchange-traded funds, shares of companies in any country, bonds of any quality from any issuer, money market instruments and bank deposits. The Fund may use derivatives to achieve the Fund's investment objective, to reduce risk or to manage the Fund more efficiently.

Suitability

This fund is designed to be bought by advised investors only, whose financial adviser uses a relevant 'attitude to risk' tool as part of the advice process. It is intended for investors with a medium to long term investment horizon (at least 5 years).

Additional information

This fund should be bought in conjunction with an attitude to risk tool as part of the financial advice process and is therefore designed to be bought by advised clients only. More information overleaf.

Performance for the share class is calculated at 12pm and performance of the index is calculated as at close of business. Note that any differences among portfolio securities currencies, share class currencies, and your home currency will expose you to currency risk.

Fund managers

Target Volatility

Lower limit	Forecast at 30 September 2019	Upper limit
10.5%	11.4%	12.6%

This fund is managed using 'forecast volatility' which uses models and assumptions to forecast the possible variations of returns over a time period of at least five years. Volatility is usually expressed as a percentage (%); the higher the number, the greater the forecast level of volatility. This data is provided by Distribution Technology Ltd.

What are the risks specific to this fund?

- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- The Fund invests in other funds (including exchange traded funds and investment trusts/companies), which may introduce more risky assets, derivative usage and other risks, as well as contributing to a higher level of ongoing charges.
- The Fund may use derivatives with the aim of reducing risk or managing the portfolio more efficiently. However this introduces other risks, in particular, that a derivative counterparty may not meet its contractual obligations.
- If the Fund holds assets in currencies other than the base currency of the Fund or you invest in a share class of a different currency to the Fund (unless 'hedged'), the value of your investment may be impacted by changes in exchange rates.
- Securities within the Fund could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses.
- The Fund is managed so that it aims not to deviate from predetermined parameters of volatility, as measured by an independent risk rating body, over a medium to long term rolling period of at least 5 years. However, during this period the Fund's volatility may be outside of such parameters if the portfolio manager believes it is expedient to do so in order to maintain investment performance. Observing the volatility parameters will be prioritised over the generation of income.
- The Fund could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Fund.
- Some or all of the Annual Management Charge and other costs of the Fund may be taken from capital, which may erode capital or reduce potential for capital growth.
- Certain funds are able to invest in shares issued by investment trust companies, including split capital investment trusts. The level of risk depends on both the share class and prevailing market conditions. Moreover, many split capital investment trusts use gearing (borrowing) which can lead to considerable volatility in their asset values and share prices. This can increase the level of risk compared with those that do not have a split capital structure and those that do not employ gearing. In certain market conditions some split capital investment trusts can lose their value.
- If the Fund or a specific share class of the Fund seeks to reduce risks (such as exchange rate movements), the measures designed to do so may be ineffective, unavailable or detrimental.

General risks

- Past performance is not a guide to future performance.
- The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested.
- Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change.

Volatility comment

Global market volatility increased during the third quarter of 2019. The S&P 500 recorded its worst day of the year on Aug. 5, plunging 3% amid worries over the global economy. Those concerns were sparked by weaker economic data and a yield-curve inversion, with the 2-year Treasury yield breaking above its 10-year counterpart. Fears around U.S.-China trade negotiations also buffeted stocks throughout the quarter. The Federal Reserve (Fed) cut interest rates for the second time this year earlier in September while other central banks pointed to easier monetary policy moving forward.

How the fund is managed

The Fund is managed so that it aims not to deviate from predetermined parameters of volatility, as measured by an independent risk rating body (Distribution Technology Ltd), over a medium to long term rolling period of at least 5 years. However, during this period the Fund's volatility may be outside of such parameters if the portfolio manager believes it is expedient to do so in order to maintain investment performance. We use models and techniques provided by an independent risk rating body to analyse the Fund's volatility profile. This methodology provides upper and lower parameters for each volatility profile (i.e. Profile 6 in the case of this Fund) based on the historic price movements of assets similar to those of this Fund. This Fund is intended for investors with a medium to long term investment horizon (of at least 5 years).

Volatility is a measure of the variation of the return of investments over a period of time. There are a number of ways in which volatility can be measured or calculated. One method, 'Realised Volatility', measures the variation of historic returns over a particular period of time. 'Forecast Volatility', which can be calculated in different ways, is calculated using models with assumptions to forecast the possible variation of returns of investments for a future time period. Forecast volatility is useful for financial planning and investment management and is used for this fund.

Further details of the volatility parameters and measurement process can be obtained from Janus Henderson. Janus Henderson has produced simple guides to volatility and risk profiling which are designed for you to use with your clients, to help them understand their investments. These guides are available at www.janushenderson.com - or on request from Janus Henderson.

Important information

Fund size at 12pm on last business day of month. Ratings and award information: Janus Henderson Core 6 Income & Growth Fund has a Defaqto Risk Rating of 6. 6 is medium risk. Risk Targeted Funds are designed to align each individual investor's attitude to risk with an appropriate investment proposition. Dynamic Planner provides an independent risk profiling service to enable an accurate assessment of the expected risk characteristics of an investment fund or model portfolio over the longer term. Ranges that have successfully gone through the RSMR's rigorous and robust methodology will be awarded their Rated Fund Range designation. In giving this rating, RSMR are confirming that their research shows Janus Henderson Investors to have a sound investment process for the fund range, and that their analysis of the performance and risk of the range of funds is in line with their expectations. One of the primary reasons for separating out ranges from the sector funds that form RSMR's usual reviews is to provide a simpler process for advisers and provide analysis and guidance from a more practical perspective. By assessing the core processes against objectives and targets rather than emphasising the peer group, RSMR feel they can identify those fund ranges in a way that advisers can then utilise across a range of clients or risk profiles more effectively and consistently. All the fund ranges that have been awarded a rating will be listed on the RSMR website, where you will also find a factsheet for each range. All this information should enable you to understand the fund ranges that are available, and the key differences between them, meaning you can then determine which, if any, is most suitable for you. † 100% of the Annual Management Charge is taken from capital. * Yields are shown net except for bond funds which are shown gross. The Historical Yield reflects distributions declared over the past 12 months as a percentage of the mid-market share price, as at the date shown. It does not include any preliminary charge and investors may be subject to tax on their distributions. + Index: The Fund has no target or constraint with reference to a benchmark. Performance assessment may best be made to funds that maintain the same risk rating from the same risk rating body as the Fund. Investors should contact their financial adviser to obtain this information. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. Unless otherwise indicated all figures sourced from Morningstar, Datastream, BNP Paribas and Janus Henderson Investors. Please note the views, opinions and forecasts expressed in this document are based on Janus Henderson Investors research, analysis and house views at the time of publication. Third party data is believed to be reliable, but its completeness and accuracy is not guaranteed. Please read all scheme documents before investing. Before entering into an investment agreement in respect of an investment referred to in this document, you should consult your own professional and/or investment adviser. The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested. Tax assumptions and reliefs depend upon an investor's particular circumstances and may change if those circumstances or the law change. If you invest through a third party provider you are advised to consult them directly as charges, performance and terms and conditions may differ materially than those shown on this document.
