Fund Manager commentary

Investment environment

The FTSE All-Share Index rose 6.5%, helped by some positive corporate updates. The Bank of England (BoE) held its benchmark interest rate at 3.75% and hinted that it could ease borrowing conditions in March. UK GDP growth remained tepid at 0.1% in the fourth quarter of 2025. Annual inflation of 3.0% in January, which marked a 10-month low, was down from December's 3.4% increase.

In the US, minutes of the Federal Reserve (Fed)'s January meeting indicated that policymakers were divided about the future path of interest rates. Fourth quarter US GDP expanded by an annualised 1.4%, which was much lower than forecast and down from the previous quarter's 4.4% gain, with the longest-ever government shut-down weighing on growth.

The European Central Bank (ECB) kept its key deposit rate unchanged at 2.0% in February, which was in line with forecasts. Eurozone annual inflation slowed to 1.7% in January, a 15-month low and down from 2.0% in December.

Portfolio review

The biggest individual contributor to relative performance was Schroders, the fund management company, which received a takeover approach from Nuveen of the US. The next biggest contributors were Tesco, the food retailer, and Deutsche Telekom, the telecommunications operator.

The biggest relative detractor was AstraZeneca, the pharmaceutical company, which is held in the portfolio but at an underweight position relative to the benchmark index. The next biggest detractors were NatWest, the banking group, and IG Group, the online financial markets trading company.

In terms of activity, we added to the position in RELX, the provider of information and analytics to businesses, legal firms and scientists. RELX reported strong financial results for 2025 and in our view could continue to grow given the value it adds for customers from its proprietorial data. We also added to the position in ITV, the TV broadcaster, which is also a leading programme and film maker. We reduced positions in 3i, the investor in private companies, and Mondi, the paper and packaging company.

Manager outlook

The effective closure of the Strait of Hormuz has caused a significant reduction in the global supply of oil and liquefied natural gas (LNG), resulting in large price rises. This will lead to both higher inflation and weaker economic growth. In our view, equity markets are likely to react positively when there are signs of the conflict in the Middle East ending.

Some 60% of the revenues earned by the companies that we are invested in are from outside the UK, which provides useful diversification, even though the companies are predominantly listed on the London Stock Exchange.

We think the valuation of UK equities is compelling compared with the equivalents overseas, possibly due to the low allocation from domestic, institutional investors. In particular, we find the dividend yield of UK equities attractive relative to the main alternatives.

References made to individual securities do not constitute a recommendation to buy, sell or hold any security, investment strategy or market sector, and should not be assumed to be profitable. Janus Henderson Investors, its affiliated advisor, or its employees, may have a position in the securities mentioned.

Glossary

Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can "gear" is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

Net assets

Total assets minus any liabilities such as bank loans or creditors.

Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

Share price

Closing mid-market share price at month end.

Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

Company specific risks

- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- The Company maintains a portfolio with a bias towards income-generating companies. This may result in the Company significantly underperforming or outperforming the wider market.
- A persistent reduction in dividend income from investee companies could adversely affect the Company's ability to maintain its record of paying a growing dividend each year.
- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio that is diversified across more countries.
- Where the Company invests in assets that are denominated in currencies other than the base currency, the currency exchange rate movements may cause the value of investments to fall as well as rise.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.
- All or part of the Company's management fee is taken from its capital. While this allows more income to be paid, it may also restrict capital growth or even result in capital erosion over time.

Not for onward distribution. Before investing in an investment trust referred to in this document, you should satisfy yourself as to its suitability and the risks involved, you may wish to consult a financial adviser. This is a marketing communication. Please refer to the AIFMD Disclosure document and Annual Report of the AIF before making any final investment decisions. Past performance does not predict future returns. The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested. Tax assumptions and reliefs depend upon an investor's particular circumstances and may change if those circumstances or the law change.
