Henderson Institutional Overseas Bond Fund

Short Report

For the six months ended 30 April 2017

Investment Fund Manager

Mitul Patel

Other information

Henderson Group plc and Janus Capital Group merged on 30 May 2017 to form Janus Henderson Group plc.

Investment objective and policy

To aim to provide a return by investing in fixed and floating rate securities in any area of the world, except the United Kingdom. The fund will invest primarily in bonds issued by Governments, public authorities and international organisations.

Risk and reward profile

The fund currently has 6 types of share in issue; A income, I accumulation, I income, I gross accumulation, Z gross accumulation and 3 gross accumulation. Each type of share has the same risk and reward profile which is as follows:

The Synthetic Risk and Reward Indicator (SRRI) is calculated based on historical volatility over a rolling 5 year period, it is reviewed monthly and updated if volatility has changed materially to cause a movement in the SRRI level. The SRRI is an indicator and may not accurately reflect future volatility and market conditions.

The value of an investment in the fund can go up or down. When you sell your shares they may be worth less than you paid for them.

The risk/reward rating above is based on medium-term volatility. In the future, the fund's actual

volatility could be higher or lower and its rated risk/reward level could change.

The share classes appear at 4 out of 7. Share classes in higher categories have shown greater and/or more frequent variations in share price in the past 5 years than those in lower categories. The lowest category does not mean risk free.

The rating does not reflect the possible effects of unusual market conditions or large unpredictable events. Under normal market conditions the following risks may apply:

Active management risk Active management techniques that have worked well in normal market conditions could prove ineffective or detrimental at other times.

Counterparty risk The fund could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the fund.

Credit risk The value of a bond or money market security may fall if the financial health of the issuer weakens, or the market believes it may weaken. This risk is greater the lower the credit quality of the bond.

Derivatives risk Derivatives use exposes the fund to risks different from, and potentially greater than, the risks associated with investing directly in securities and may therefore result in additional loss, which could be significantly greater than the cost of the derivative.

Exchange rate risk Changes in currency exchange rates may cause the value of your investment and any income from it to rise or fall.

Hedging risk Measures designed to reduce the impact of certain risks may not be available or may be ineffective.

Interest rate risk When interest rates rise (or fall), the prices of different securities will be affected differently. In particular, bond values generally fall when interest rates rise. This risk is generally greater the longer the maturity of a bond investment.

Liquidity risk Any security could become hard to value or to sell at a desired time and price, increasing the risk of investment losses.

The full list of the fund's risks are contained in the "Risk Factors" section of the fund's prospectus.

There have been no changes to the risk rating in the period.

The SRRl conforms to the ESMA guidelines for the calculation of the SRRl.

Investment review

The six-month period to 30 April 2017 began with yields moving significantly higher. This development was driven primarily by two occurrences. First, the election of Donald Trump to the presidency in the US shifted expectations of growth in the short to medium term. His stated policies, if enacted, looked likely to boost both growth and inflation in the short term. Second, commodities continued to perform strongly, on the back of improved China-led global growth and positive sentiment about the results of a Trump presidency. This profile led to US Treasuries significantly underperforming. Japanese government bond yields drifted slightly higher as further policy easing became seen as less likely; however, the newly introduced 'yield curve control' policy limited the amount by which they could do so. Core government bond markets in Europe also sold off significantly, but outperformed those in the US due to a much weaker growth and inflation outlook. Italian and French government bond spreads also widened against equivalents in Germany, because of political concerns. In France, the election of the Eurosceptic candidate seemed more likely in the wake of the Trump victory. Meanwhile, in Italy, the scale of the government's defeat in a constitutional referendum continued a developing trend. As we moved into February, these European political concerns were the catalyst for core bonds to rally in a risk-off environment. Fears mounted that Marine Le Pen could be more competitive than previously anticipated in the French presidential election, and that the nativist PVV party in the Netherlands could be a disruptive force if it put up a strong showing in the Dutch parliamentary elections. Trump's inability to pass his healthcare reform act, along with a declining oil price, also raised questions about the durability of the 'reflation' trade, thereby supporting core government bonds.

The fund underperformed benchmark (the JP Morgan Global Bond ex UK index) during the period, returning -9.3% compared with the benchmark's return of -8.6%.

Positions that contributed positively to performance over the period included being underweight French bonds against Germany, as political fears in Europe rose; a curve position in the US (being underweight the 5y sector against the 2y sector) that benefited from the post-election reflationary bounce; and being underweight long dated German bonds in expectation of concerns about tapering of the European Central Bank's (ECB) asset purchase programme.

The negative contributors included overweight positions in Japanese bonds, which underperformed as the marginal easing in that economy came through currency rather than bonds, and being underweight short dated US Treasuries, due to unmet expectations that the Federal Reserve would indicate a slightly more aggressive pace of rate hikes.

In foreign exchange, we made a small loss being long the Swedish krona against the euro as, despite a strong growth backdrop in Sweden, the Riksbank's focus on inflation means it has maintained a bias to prevent the krona from appreciating excessively.

Looking forward, we seem at last to have come through some key political risks for the year. While the German elections are yet to come, the election of either Merkel or Schulz as chancellor should result in a relatively benign market reaction. However, the recent escalation of events in Syria and North Korea means that some geopolitical event risk remains. The inability of the Trump administration to pass healthcare reforms in the US has raised question marks over its ability to introduce other fiscal reforms, expectations of which have particularly supported equity markets. This, combined with signs that the authorities in China are trying to tighten monetary conditions at the margin, has taken the shine off some manifestations of the reflation trade. Beyond that, having now passed the peak in headline inflation for the time being, we may see some cooling of central banks' desire to remove policy accommodation too rapidly, although bond-buying constraints may still prompt the ECB to announce downward adjustments to its bond purchase programme.

Performance summary

Cumulative performance	Six months	One year	Five years	Since launch
	31 Oct 16-30 Apr 17 %	30 Apr 16-30 Apr 17 %	30 Apr 12-30 Apr 17 %	02 Oct 00*-30 Apr 17 %
